REPORT

ON THE

TWELFTH CENSUS OF SCOTLAND.

CENSUS OFFICE,
EDINBURGH, 27th December 1913.

TO THE RIGHT HONOURABLE THOMAS M'KINNON WOOD, M.P.,

His Majesty's Secretary for Scotland.

SIR,

We have now the honour of submitting the Third and Final Volume of our Report on the Twelfth Census of Scotland, which was taken on the night of 2nd April 1911.

We have already submitted a Preliminary Report, and the First and Second Volumes of this Report. The Preliminary Report was rapidly prepared from abstracts furnished by registrars, and was published within a few weeks of the date of the Census; it dealt with the population figures of the more important administrative divisions of Scotland. The First Volume was submitted in thirty-seven Parts, at dates varying between 27th February 1912 and 31st January of this year, each part being so designed as to supply for each of the four cities and for each of the thirty-three counties all the more essential censal information relative thereto. The Second Volume was submitted on 27th June of this year, and consisted of a summary of the Parts of the First Volume, along with figures relative to Scotland as a whole, and with some information not included in the First Volume, the most noteworthy being facts regarding the Industries of the population.

The volume now submitted deals with subjects which, in the previous volumes, were either not dealt with or only briefly considered, and may, in fact, be received as an appendix volume dealing with points, which, while not being of the same administrative importance as those dealt with in the First and Second Volumes, are none the less of national interest, if not of national importance.

The following is a list of subjects dealt with in this volume :—

- The occupations of persons enumerated in Scotland but born in England and Wales and Ireland.
- The nationalities, ages, and occupations of Foreigners, Colonials, and naturalised British subjects, enumerated in Scotland.
- The numbers, distribution, birthplaces, and occupations of the infirm.
- Special statistics regarding the inmates of institutions.
- The statistics of the fertility of marriage.

In this volume, as in the previous two volumes, we make no attempt to give complete descriptive details in the text of the information contained in the large abstract tables, holding our first and principal duty to be the tabulation of the censal information in such a form and so clearly as to enable those interested, administratively or otherwise, to gather for themselves what statistical facts they may require, and for themselves formulate conclusions. The text we now submit should be taken as a mere summary of some of the points that appeal to us as of importance or interest, and not as an exhaustive analysis of even the more important facts. Completeness is aimed at in the abstract tables, but not in the text.

A considerable section of the volume deals with matters not previously included in the reports on Scottish Censuses, and among these may be mentioned the occupations of persons born in England, Wales, and Ireland, the birthplaces of the infirm, and the fertility of marriage. These subjects, and especially the last named, have added greatly to the work of tabulation, but we trust that the figures and conclusions arrived at will contribute some additional interest to the Report.

In closing our Report we desire to put on record our appreciation of the loyal support given to us by the entire Census staff, and more particularly of its senior members. Without the loyal support of the staff, and without the skilful and painstaking supervision of Mr Andrew Froude, and of Mr John J. Cossar, who acted jointly as superintendents, the work could not have been brought to a successful issue. The introduction of a new method of tabulation, of local subdivisions of the country not previously considered, of new subjects—more especially the industries of the population and the fertility of marriage—have all tended to increase the complexities and difficulties of the preparation of the Report, and that all these difficulties have been overcome, and that this Report should be completed in a period of time only slightly longer than that occupied in the preparation of previous Census Reports, reflect credit on the capabilities, industry, and application of the staff and their supervisors.

We desire to express our acknowledgment and appreciation of advice and help given us by Dr Tocher, Lecturer on Statistical Methods in the University of Aberdeen, and by Mr R. M. Hunter, member of the Faculty of Actuaries in Scotland. The former, by advising us in the selection of statistical methods, and by freely criticising portions of the work submitted to him, gave us the benefit of his statistical experience and knowledge. The latter, by applying his mathematical skill to the graduation of the Single Ages Table, which appeared in the Second Volume, was of material service in the completion of our work. To both of them sincere thanks are due, not only from us, but also from all others interested in our national statistics.

Having now had a full experience of the advantages of mechanical card tabulation, we are in a position to give an emphatic and unqualified opinion that this method is a very great advance on the older ticking-sheet method. It has given us greater confidence in the accuracy of the tabulation; it has enabled us to carry tabulations further and to elucidate new facts; and it has shortened the time necessary for the completion of the work. The final volume of the report on this Census may have been produced in no shorter time than the report on the last Census—it has, in fact, taken rather longer—but had the elaboration of the present Census been dealt with by the older method, we have no hesitation in asserting that its completion would have been delayed for months, if not years. The addition to the Census studies of making researches into the industries of the population, and into the fertility of marriage, has increased the work of tabulation enormously, and, were it not for the mechanical means adopted, the tabulation could not have been accomplished with the same degree of accuracy and comprehensiveness.

We have the honour to be,

Sir,

Your most obedient Servants,

J. PATTEN MACDOUGALL,
Registrar General.

JAMES C. DUNLOP,
Superintendent of Statistics.

REPORT

ON THE

TWELFTH CENSUS OF SCOTLAND (1911).

A.—OCCUPATIONS OF PERSONS OF ENGLISH, WELSH, AND IRISH BIRTH ENUMERATED IN SCOTLAND.

ON pages 3 to 42 there is given a tabulation of the stated occupations of English, Welsh, and Irish people enumerated in Scotland, or, more strictly, of those whose stated birthplaces were in England, Wales, or Ireland, for no doubt there were many with English, Welsh, or Irish birthplaces but claiming Scottish nationality, and many with Scottish birthplaces but claiming English, Welsh, or Irish nationality. Census information does not permit of strict classification according to nationality, and consequently the place of birth falls to be used as an approximate indication of it.

Persons of English and Welsh birth enumerated in Scotland numbered 165,102, and those of Irish birth, 174,715, the former constituting 3·47 per cent., and the latter 3·67 per cent., of the total population. Compared with the corresponding returns of 1901, those of English and Welsh birth were found to be 31,079, or 23·2 per cent. more, but those of Irish birth were found to be 30,349, or 14·8 per cent., fewer. The large increase in the number of those of English and Welsh birth, and the approximately equal decrease in the number of those of Irish birth, are commented on in the Second Volume of this Report.

Of the total population of Scotland, 30·96 per cent. consists of males of ten years of age and upwards having remunerative occupations, and 12·46 per cent. of females of these ages and with occupations. Of those of English or Welsh birthplace 67,733, or 41·02 per cent., and 19,186, or 11·62 per cent., are occupied males and females respectively of these ages. Occupied males among those of Irish birth number 88,809, and females, 15,459, the former constituting 50·83, and the latter 8·85, per cent. of the total. This comparison shows that in both the English and Welsh and the Irish sections of the population the proportion of occupied males is larger than it is in the total population, but that no such excess is found among the females. This result is only what might have been anticipated, for naturally it is the male population of working ages which is most affected by migration.

In the tables on pages 3 to 42 the information is so arranged as to show not only the numbers engaged in the various occupations, but also the distribution by cities and counties of those so employed, and these tables are summarised in respect of the numbers in the various occupations in Tables A and B. In these latter tables the various occupations for purposes of convenience are grouped into classes, but in reading the tables and the text it should be borne in mind that although these classes have names suggestive of their being complete "Industries" as dealt with in Volume II., such is not the case, the classes being mere groups of occupations, and no attempt having been made to allocate the occupied according to the particular industries—defined as "the occupations of the employers"—to which they are attached.

The groups of occupations including the largest numbers of occupied males of English and Welsh birth, and the numbers in them, are manufacture of iron and other metals, 12,599; Royal Navy, 7,373; commerce, 4,208; mining, 3,809; domestic service, including outdoor domestic service and service in hotels, eating-houses, etc., 3,775; army, 2,389; building trades, 2,332; and agriculture, 2,055: and those containing the largest

numbers of males of Irish birth are manufacture of iron and other metals, 24,813; mining, 11,909; general labourers, 6,019; building trades, 4,963; road transport, 3,492; agriculture, 3,232; railway service, 3,071; docks, 2,985; and Local Government Service, including gaswork and sanitary services, 2,924.

TABLE A.—OCCUPATIONS OF MALES OF ALL BIRTHPLACES
AND OF ENGLISH OR WELSH AND IRISH BIRTH.

OCCUPATIONS OR GROUPS OF OCCUPATIONS.	NUMBER OF OCCUPIED MALES OF			RATIO PER 10,000 OCCUPIED MALES OF		
	All Birth- places.	English or Welsh Birth.	Irish Birth.	All Birth- places. (1,473,757)	English or Welsh Birth. (67,733)	Irish Birth. (88,809)
Civil and Post Office Services . . .	16,445	1,538	546	112	227	61

Commerce, including Clerks	75,703	4,208	1,497	514	621	169
Railway Service	49,456	1,857	3,071	336	274	346
Road Transport Service	56,758	1,356	3,492	385	200	393
Merchant Shipping Service	21,645	1,957	1,223	147	289	138
Occupations about Docks	14,941	440	2,985	101	65	336
Agricultural Occupations	165,689	2,055	3,232	1,124	303	364
Fishing Occupations (Fishermen- Crofters excluded)	24,163	1,048	33	164	155	4
Mining Occupations	157,655	3,809	11,909	1,070	562	1,341
Occupations in Iron and Other Metal Manufacture	245,489	12,599	24,813	1,666	1,860	2,794
Building Occupations	96,087	2,332	4,963	652	344	559
Making and Selling of Clothing . . .	42,274	1,990	2,236	287	294	252
General Labourers	34,213	1,334	6,019	232	197	678
Navvies	2,348	439	884	16	65	100

The groups of occupations which include the largest numbers of females of English and Welsh birth are domestic service, 7,290—5,574 of these being returned as indoor servants; occupations connected with the making and selling of dress, including dressmakers, tailors, hat and bonnet makers and dealers, etc., 2,245; manufacture of textiles, 1,985; teaching, 1,116; and commercial occupations, mostly clerks, 1,029. The largest numbers of occupied females of Irish birth are found in domestic service, 5,604—3,381 of these being indoor domestic servants; in occupations connected with the manufacture of textiles, 2,794; and in those connected with the making and sale of dress, 1,923.

In the Civil Service, including the Post Office Service, males of English and Welsh birth are in relative excess, for in it there are employed 22·7 per thousand of the occupied males, while the corresponding figures for the entire population and for the Irish-born section of the population are 11·2 and 6·1 respectively. The same is found in the other Government services, the navy and the army, the proportions of the occupied males in these services being both higher than those found in the entire population or in the Irish-born section of the population. Men of English or Welsh birth in the navy con-

stitute 108·9 per thousand of the total occupied males, and in the army, 35·3 per thousand, while in the entire population these figures are 5·8 and 4·7; and in the Irish-born section of the population, 5·5 and 3·4. Of the men of the Royal Navy enumerated in Scotland or in Scottish waters, 7,373, or 86·4 per cent., were of English or Welsh birth, and 485, or 5·7 per cent., of Irish birth, leaving only 671, or 7·9 per cent., as the maximum possible number of Scottish birth.

In the occupations connected with Local Government services, including those connected with gaswork and sanitary services, Irish-born males are found in considerable relative excess. In the entire population 14·7 per thousand of all occupied males are found in these services, and in the English- and Welsh-born section of the population, 10·0 per thousand, but in the Irish-born section of the population this ratio is 32·9 per thousand. Of the Irish-born males in this group of occupations the largest numbers are found in gaswork service, 1,386, and in scavenging and sanitary service, 697.

In occupations connected with the legal and medical professions the number of males of Irish birth is relatively small, for in the entire population the ratio of those engaged in occupations connected with the legal profession to the total occupied males is 6·5, and of those connected with the medical profession, 3·7. In the English- and Welsh-born section of the population these ratios are 4·6 and 6·5 per thousand respectively, while in the Irish-born section they are only 0·6 and 1·4 per thousand.

In the clerical profession occupied males of English and Welsh birth are found to be in relative excess. In the entire population males with occupations falling under that head constitute 4·9 per thousand of all occupied males, in the English- and Welsh-born section of the population, 10·8 per thousand, and in the Irish-born section, 5·3 per thousand.

In occupations connected with domestic service, indoor and outdoor, and including allied occupations in hotels and public-houses, and in boarding- and lodging-houses, those of English and Welsh birth are found to be relatively more, and those of Irish birth to be relatively less than what is found in the whole population. In the entire population 34·9 per thousand of the occupied males are found in this group, while the corresponding ratios in the English- and Welsh-born and in the Irish-born sections of the population are 55·7 and 23·8 per thousand respectively.

In the commercial occupations, which include merchants, agents, accountants, clerks, insurance officials, etc., a similar condition is found, males of English and Welsh birth being in some relative excess, and those of Irish birth in some relative deficit. In the entire population, 51·4 per thousand of the occupied males are found in these occupations, while in the English- and Welsh-born section of the population this ratio is 62·1 per thousand, and in the Irish-born section of the population 16·9 per thousand.

A smaller proportion of the males of English and Welsh birth in Scotland have occupations connected with railway service than is the case either among the general population, or among the Irish-born section of the population. In the general population males in railway service occupations constitute 33·6 per thousand of the total occupied males, and in the Irish-born section of the population 34·6; but in the English- and Welsh-born section of the population only 27·4. The same is found in the group of occupations connected with road transport; in the entire population males in these occupations constitute 38·5 per thousand of the total occupied males, and in the Irish-born section of the population 39·3 per thousand, but in the English and Welsh section of the population they constitute only 20·0 per thousand.

In occupations connected with the merchant service and shipping, males of English and Welsh birth are found to be in relative excess, amounting to 28·9 per thousand of the total occupied males of English and Welsh birth—the corresponding figure in the entire population being 14·7, and in the Irish-born section of the population 13·8.

In occupations connected with docks, males of Irish birth are found to be in relative excess, while those of English and Welsh birth are found to be in relative deficit. In the general population males with these occupations amount to 10·1 per thousand of the total occupied males, while in the Irish-born section of the population this ratio is 33·6, and in the English- and Welsh-born section 6·5.

In the occupations connected with agriculture, including those connected with market gardening and forestry, males both of English and Welsh birth and of Irish birth are found to be in relative deficit. In the entire population 112·4 per thousand of all occupied males are found to have agricultural occupations, while the corresponding ratios in the English and Welsh and in the Irish sections are found to be 30·3 per thousand and 36·4 per thousand. A migration from Ireland to some of the agricultural counties of Scotland during the season when potato-gathering and harvesting is taking place is a well-known occurrence, and it is only reasonable to suppose that had the

census been taken later in the year, say in August or September, this ratio in the Irish-born section of the population would have been considerably higher.

Only a small proportion of males of Irish birth is found in the occupations connected with fishing. In the entire population 16·4 per thousand of the occupied males are found in these occupations, and in the English- and Welsh-born section of the population 15·5 per thousand; but in the Irish-born section of the population this ratio is only 0·4 per thousand.

In mining occupations males of Irish birth is found to be in some relative excess, and those of English and Welsh birth in some relative deficit. In the entire population males with these occupations constitute 107·0 per thousand of the total occupied males, in the English- and Welsh-born section of the population they constitute 56·2 per thousand, and in the Irish-born section 134·1 per thousand.

In the occupations connected with the manufacture of iron and other metals, males of Irish birth are found to be in relative excess, and to constitute 279·4 per thousand of the total occupied males, the corresponding ratios in the entire population, and in the English- and Welsh-born section of the population, being 166·6 and 186·0 respectively.

In the building trades males of English and Welsh birth are found to be markedly below their due proportion, and those of Irish birth to be also so but in a less degree. In the entire population, occupied males in these trades constitute 65·2 per thousand of all occupied males; in the English- and Welsh-born section of the population they only constitute 34·4 per thousand, and in the Irish-born section 55·9 per thousand.

The proportion of general labourers in the Irish-born section of the population is found to be much higher than either in the entire population or in the English- and Welsh-born section of the population; the ratio in the Irish-born section is 67·8 per thousand of the occupied males, while the corresponding figures in the entire population and in the English- and Welsh-born section of the population are 23·2 and 19·7 respectively.

**TABLE B.—OCCUPATIONS OF FEMALES OF ALL BIRTHPLACES
AND OF ENGLISH OR WELSH AND IRISH BIRTH.**

OCCUPATIONS OR GROUPS OF OCCUPATIONS.	NUMBER OF OCCUPIED FEMALES OF			RATIO PER 10,000 OCCUPIED FEMALES OF		
	All Birth- places.	English or Welsh Birth.	Irish Birth.	All Birth- places. (593,210)	English or Welsh Birth. (19,186)	Irish Birth. (15,459)
Civil and Post Office Services . . .	4,192	135	40	71	70	26
Clerical Profession and Service . . .	1,064	289	148	18	151	96
Medical Service	11,153	910	391	188	474	253
Teaching Profession and Service . . .	19,244	1,116	619	324	582	400
Art, Music, Drama	3,757	618	59	63	322	38
Domestic Service	176,540	7,290	5,604	2,976	3,800	3,625
Commerce, including Clerks	30,031	1,029	334	506	536	216
Textile Manufacture	115,369	1,985	2,794	1,945	1,035	1,807
Agricultural Occupations	33,057	294	468	557	153	303
Making and Selling of Clothing . . .	73,393	2,245	1,923	1,237	1,170	1,244

Among occupied females of English and Welsh birth, relatively large numbers are found in the services of the clerical, medical, and teaching professions, in domestic service, and in occupations connected with art, music, and the drama, while a relatively small number is found in the agricultural occupations. Among females of Irish birth, similar relative excesses and deficits are found, with the one exception of occupations connected with art, music, and the drama, where they are found to be below and not above their due proportion. These comparisons are shown by the following figures where against each of these groups of occupations three numbers are given, the first being the ratio of occupied females in the group to a thousand of the occupied females in the entire population, the second being the corresponding ratio in the English- and Welsh-born section of the population, and the third that in the Irish-born section of the population:—clerical service, 1·8, 15·1, 9·6; medical service, 18·8, 47·4, 25·3;

teaching service, 32·4, 58·2, 40·0; domestic service, 297·6, 380·0, 362·5; agricultural occupations, 55·7, 15·3, 30·3; occupations connected with art, music, and the drama, 6·3, 32·2, and 3·8. Of domestic servants of English and Welsh birth 76·5 per cent. are described as indoor servants, and 23·5 as servants of other classes; but of the domestic servants of Irish birth only 60·3 per cent. are described as indoor domestic servants, while 39·7 per cent. are described as other classes of servants.

Fuller detail regarding the numbers of English-, Welsh-, and Irish-born in the various occupations, and also of their distribution throughout the various counties, is given in the tables on pages 3 to 42, and to those tables reference is made.

B.—FOREIGNERS.

THE total number of foreigners, *i.e.*, persons born outwith British territory, colony, or dependency, and who are neither British subjects by parentage nor naturalised British subjects, was 24,739, 15,709 being males, and 9,030 females. Compared with the corresponding figures of 1901, male foreigners number 1,263 more, female 851 more, and the two sexes combined 2,114 more. The intercensal rate of increase in the male foreign population is 8·74 per cent., in the female foreign population 10·40 per cent., and in the total foreign population 9·34 per cent.

The principal statistical facts regarding these foreigners, including their distribution by nationality, by place of residence, by occupation, and by sex and age are tabulated on pages 43 to 61, and the following notes are based on the figures there given.

Russians and Poles.—These, though tabulated separately, are better considered collectively, because persons belonging to Russian Poland might equally truthfully describe themselves either as Russians or as Poles, and confusion might, and almost certainly would, arise if they were dealt with separately. Collectively, they form the largest group enumerated, amounting to 11,032, or nearly 45 per cent. of all the foreigners enumerated in Scotland. 6,520 are males, and 4,512 females. Compared with the corresponding figures of 1901, the males are found to be 233 more, the females 426 more, and the two sexes collectively 659 more. Of the males, 3,390, and of the females, 2,712, were described as Russians, 3,130 males and 1,800 females being described as Poles. Of the males, 5,924 are stated to have remunerative occupation, and of the females, 650. Of the occupied males the largest numbers are found to be miners, 2,611; tailors, 687; workers in iron and other metal manufacture, 661; commercial travellers (a description sometimes adopted by hawkers and peddlers of certain classes), 304; and workers in furniture manufacture, 283. Of the occupied female Russians and Poles the largest number, 279, are described as tailors or dressmakers. Of the above “miners” and “workers in iron and other metal manufacture,” the majority are described as Poles, but in the other occupations mentioned the majority are described as Russians. Of the Russians and Poles the largest numbers were found in Lanarkshire, where 8,590, out of the total of 11,032 were enumerated, 4,757 being enumerated in Glasgow, and 3,833 in the remainder of the county. In the County of Edinburgh, Russians and Poles numbered 1,083; in the County of Ayr, 608, while the numbers are smaller in other counties. Of those enumerated in the County of Edinburgh, 721 were in the City of Edinburgh, and 362 elsewhere within the county. In Dundee, Russians and Poles numbered 98, and in Aberdeen 44. Caithness, Kinross, and Nairn are the only three counties in which no Russians or Poles were enumerated.

Italians.—Next to Russians and Poles, Italians are found to be most numerous. They number 4,594—constituting fully 18 per cent. of all the foreigners—and they are 543 more than in 1901. Of these, 3,103 are males and 1,491 females. The largest numbers are found in the counties of Lanark, 2,114—1,398 being enumerated in Glasgow; in Edinburgh, 482—334 being within the City of Edinburgh, and 148 in the remainder of the county; in Renfrew, 310; in Fife, 257; in Ayr, 286; and in Forfar, 271. Italians were enumerated in all counties with the exception of Ross and Cromarty, and Sutherland. The number enumerated in the City of Dundee was 199, and in that of Aberdeen 115. Of the males, relatively large numbers are described as engaged in the manufacture and sale of bread, biscuits, cakes, and sweets, 1,542; as workers in the sale or preparation of other foods, 199; as keepers of coffee-, lodging-, or eating-houses, 278; as

waiters or domestic servants, 187; as musicians, 48; and as hairdressers, 166. Of the occupied Italian females 82 are described as waitresses or domestic servants, and 161 as workers in the making or selling of foods. Comparison with the figures of the 1901 census shows that Italians in Scotland have increased in number by 543, and that the greater part of this increase has occurred in the Counties of Fife, Ayr, and Forfar. Of the male Italians 2,997 are aged ten years and upwards, and of these, 2,875, or 95·93 per cent., are returned as having some remunerative occupation. Of the female Italians 1,401 are ten years of age and upwards, and of these, 321, or 22·91 per cent., are returned as having some remunerative occupation.

Germans.—The total number of Germans enumerated in Scotland was 2,362, 1,509 being males, and 853 females. In 1901 male Germans numbered 2,014, and female 1,218, and the intercensal changes in their numbers are diminutions, male Germans being now 505 fewer, female 365 fewer, and the total 870 fewer. Of the Germans 1,022, or 43·27 per cent., were enumerated in the Cities of Glasgow and Edinburgh, 561 being in Glasgow, and 461 in Edinburgh. Germans in the Cities of Dundee and Aberdeen numbered 61 and 100 respectively. Considerable numbers were found in the following counties, the figures relative to Edinburgh and Lanark being given exclusive of the numbers in the Cities of Edinburgh and Glasgow:—Lanark, 237; Fife, 230; Edinburgh, 151; Renfrew, 80; Ayr, 77; and Stirling, 61. Of the males 1,473 were ten years of age or upwards, and of these, 1,383, or 93·89 per cent., were returned as having remunerative occupations; while of the females 814 were of these ages, and 237 of these, or 29·12 per cent., were returned as having remunerative occupations. The occupations to which the largest numbers of males were returned, and the numbers so returned, include seamen, 273; servants, domestic, and in hotels, lodging-houses, eating-houses, etc, 166; miners, 91; hairdressers, 76; commercial clerks, 59; makers and dealers in bread, biscuits, cakes, etc., 59; butchers, 45; and musicians, 41. Among the occupied German females there are 97 domestic servants and 46 teachers.

Citizens of the United States of America.—Persons born outwith the United Kingdom, and stated to be citizens of the United States, numbered 1,176, 618 being males, and 558 females. In 1901 they numbered 690, and the intercensal change is thus an increase of 486, males showing an increase of 240, and females of 246. Of these American citizens 535, or 45·49 per cent., were enumerated in the four cities, 162 being in Edinburgh, 284 in Glasgow, 38 in Dundee, and 51 in Aberdeen. In the counties, exclusive of these cities, considerable numbers were found in Lanark, 133; Renfrew, 79; Fife, 59; Ayr, 55; and Edinburgh, 51. Of the males 532, and of the females 475, were aged ten years or upwards, while 451 of the former, and 131 of the latter, were returned as having remunerative occupations. The occupations to which these American citizens were returned are very mixed, and no predominantly large numbers are found in any particular occupation, or group of occupations. The largest number of males returned to any one occupation is only 33, and of females only 24, the former consisting of miners, and the latter of domestic servants.

Norwegians.—These numbered 996, 766 being males and 230 females. In 1901 Norwegian males numbered 706, and females 208, and the intercensal increase of males is thus found to be 60, and of females 22. Of the Norwegians, the largest numbers were found in the County of Stirling, 189; in Glasgow, 155; in Shetland, 122; in Fife, 106; in the City of Edinburgh, 74; in the County of Edinburgh, exclusive of the City of Edinburgh, 90; and in the County of Lanark, exclusive of the City of Glasgow, 42. Of the males, 753 were aged ten or more, and of these, 719 were returned as having remunerative occupation; while the females of ten years of age and over numbered 227, and of these, 120 were returned as having such occupation. The occupations to which the largest numbers of males were returned, and the numbers so returned include seamen, 490; workers in oil (mostly connected with the whale fishing in Shetland), 39; clerks, 32; and fishermen, 31. The majority of the occupied Norwegian females, 96, were returned as domestic servants.

French.—These numbered 720, of whom 314 were males and 406 females. They are the only foreigners in which the females enumerated outnumbered the males. In 1901 male French numbered 259, and the female 331, and the intercensal increase of males has thus amounted to 55, while that of females has amounted to

75. Of the French, 373, or 52 per cent., were enumerated in the four cities, the number in Edinburgh being 164; in Glasgow, 162; in Dundee, 23; and in Aberdeen, 24. Of the males, 308, and of the females, 399, were aged ten years or over, and of these, 281 and 255 respectively were returned as having occupations. The occupations of the largest numbers of the males, and the numbers in them, are seamen, 46; cooks, 46; and teachers, 30; and the occupations of the largest numbers of the females are nuns and Sisters of Charity, 90; and domestic servants, 64.

Danes.—Danes enumerated numbered 712, 554 being males and 158 females. In 1901 males numbered 450 and females 114, and the intercensal increase of males is thus found to be 104, and of females, 44. The largest numbers were enumerated in the three counties which have shipping ports on the Firth of Forth, Edinburgh, Fife, and Stirling, 443, or fully 62 per cent. of the total being enumerated in these counties. The number in Edinburgh was 263; in Fife, 126; and in Stirling, 54. The number enumerated in the City of Edinburgh was 73, and in the City of Glasgow, 62. Of the males, the majority, 326, are found to be seamen, and of the occupied females, who number in all 71, the majority, 51, are domestic servants.

Swedes.—These numbered 711, 580 being males, and 131 females. In 1901 they numbered 680, 517 being males, and 163 females. Thus the intercensal change is found to be an increase of 63 in the number of males, and a decrease of 32 in the number of females. The largest numbers were enumerated in the Counties of Fife, 148; Shetland, 147; Lanark, 122; and Edinburgh, 121. Of those enumerated in the County of Edinburgh, 53 were in the City of Edinburgh, and 68 in the remainder of the county; and of those enumerated in the County of Lanark, 105 were in Glasgow, and 17 in the remainder of the county. Of the males, 573 were of ten years of age or over, and of these the great majority were either seamen or fishermen, the former numbering 292, and the latter, 147. The females with occupations numbered 60, 35 of them being domestic servants.

Austrians and Hungarians.—Austrians and Hungarians collectively were found to number 528, 386 being males, and 142 females. In 1901 they numbered 404, 270 being males, and 134 females. The intercensal change is thus an increase of 116 males and 8 females. The largest numbers were found in the County of Lanark, 282 being enumerated in Glasgow, and 56 in the remainder of the county. Occupied males numbered 347. Their occupations were very varied, no large number being returned as belonging to any one occupation or to any one group of occupations; a considerable number were returned as miners, 73, and as waiters, 46. Of the females, only 28 were returned as having occupations.

Dutch.—These numbered 407, 298 being males, and 109 females. In 1901 they numbered 185, 135 being males, and 50 females, and the intercensal change is thus an increase of 163 males, and one of 50 females. Of the males, 271 were returned as having occupations, and of the females, 21. Of the former, the largest numbers were returned as seamen, 103; agricultural workers, mostly engaged in the preparation of moss litter, 62; and fishermen, 25.

Swiss.—These numbered 369, 190 being males and 179 females. In 1901 the males numbered 199, and the females 177, and the intercensal change has thus been an increase of 2 in the number of females, but a decrease of 9 in the number of males. Of the 190 males, 81 were enumerated in the City of Glasgow, and 35 in the City of Edinburgh, while of the 179 females, 48 were enumerated in the City of Edinburgh, and 43 in the City of Glasgow. In all 231, or 62·60 per cent., were enumerated in the four large cities. Of the 190 males, 183 were returned as having remunerative occupation, the majority of them being connected with domestic or eating-house service, 30 being stated to be cooks, 29 waiters, 27 makers or sellers of bread, cakes, or sweets, 18 keepers and servants of coffee- or lodging-houses, and 15 domestic servants. The occupied females number 110, 75 of them being domestic servants, and 20 teachers.

Spaniards.—These are found to number 300, the males being 227, and the females 73. The intercensal increase of males amounts to 96, and of females to 48. Of the Spaniards the largest number was enumerated in the County of Ayr, 106 males and 37 females, in all 143, or 47·67 per cent. of the total enumerated in Scotland.

In Lanarkshire the Spaniards numbered 55; in Dumbartonshire, 27; in Edinburghshire, 26; and in Dumfriesshire, 21. The intercensal increase in their number is largely accounted for by the increase found in Ayrshire, where in 1901 Spaniards numbered 40, the figure at the present census showing an increase of 103. This increase is further traced to the number of Spaniards engaged in iron manufacture and mining in the Parishes of Auchinleck, Muirkirk, and New Cumnock. In Dumfriesshire the intercensal increase of Spaniards amounts to 14; in Edinburghshire to 15; and in Dumbartonshire to 25. In Lanarkshire their number has diminished by 30 during the intercensal period, there having been 85 of them in 1901. Of the 227 males 175 are stated to have remunerative occupations, while of the 73 females only 9 are stated to have such occupations. The principal occupations of the males are seamen, 64; workers in iron and steel manufacture, 54; and miners, 13.

Belgians.—These are found to number 137, 87 being males, and 50 females. In 1901 the males number 90, and the females 39, and the total intercensal increase is accordingly 8. Of the Belgians, 45 were enumerated in the City of Glasgow, 17 in the City of Edinburgh, and 17 in the County of Inverness. Of the males, 71 were returned as having remunerative occupation, 16 of them being workers in quarries, and smaller numbers in other occupations. Of the females, 22 were described as having occupations.

Portuguese.—These numbered 52, and are 48 more than in 1901. Of these, 50 were males and 2 females. Of the males, 34 were described as having remunerative occupations, the majority of that number, 24, being stated to be seamen. Portuguese enumerated in the City of Glasgow numbered 22, and in the County of Renfrew 15.

Turks.—These numbered 38, which is 5 fewer than in 1901. Of their number, 29 were males, and 9 females; 18 were enumerated in Glasgow, and 10 in Edinburgh. Of the 29 males, 20 were described as having occupation, and of the females, 3 were so described.

Servians, Roumanians, and Bulgarians.—These collectively numbered 19, which is 14 fewer than in 1901. Of these, 16 are Roumanians, 2 are Bulgarians, and 1 a Servian; 3 are females—2 Roumanians, and 1 Bulgarian. Of the 19 persons in this group 13 were enumerated in Glasgow.

Asiatics.—Asiatics, other than British subjects, numbered 263, 171 being Chinese, 21 Japanese, and 71 of other nationalities. In 1901 these collectively numbered 78, the Chinese numbering 38, the Japanese 21, and the remainder 19. Of the Chinese, 155 are males, and 16 females; of the Japanese, 18 are males, and 3 females, and of the remainder, 60 are males, and 11 females. Of the male Chinese 81, of the male Japanese 12, and of the males of the remainder 48, were described as having remunerative occupation. The majority in each case were seamen, the Chinese seamen numbering 76; the Japanese, 3; and those of the remainder, 38.

Africans.—These, exclusive of British subjects, numbered 88, of whom 58 were stated to be natives of Egypt. In 1901 Egyptians enumerated in Scotland numbered 8, and other Africans, 10. Thus there has been an intercensal increase of 50 in the number of the Egyptians and 20 in the number of other Africans. Of the Egyptians, 42 are male, and 16 female, and a majority of them are students. Of the other Africans, 26 are males, and 4 females; 7 were enumerated in Edinburgh, and 18 in Glasgow; and the most frequent occupations are those of drapers and hawkers.

Americans other than United States Citizens.—These include 6 citizens of Mexico, 31 of Brazil, 48 of the Argentine Republic, and 54 of other American States, in all 139. In 1901 these collectively numbered 59, and there has thus been an intercensal increase of 80. A considerable proportion of the total were students, and only 49 had remunerative occupations.

Increase of Foreigners since 1861.—The foregoing analysis of the foreign population of Scotland is based on the total number of foreigners enumerated, and as that number includes a considerable population enumerated on board ship, it cannot be accepted as a strict indication of the amount of the resident foreign population. This being so, the foreign population enumerated on board ship has been separately tabulated—*vide* Table IX. (pp. 58 and 59)—and by a comparison between the total figures and those of the shipping section of the population an estimation may be made of the

remainder—viz., the resident section of the foreign population. But before considering these figures, a few remarks regarding the intercensal increases of foreigners since 1861 may not be without interest.

TABLE C.—NATIONALITY OF FOREIGNERS ENUMERATED IN
SCOTLAND AT EACH CENSUS, 1861-1911.

COUNTRY OF NATIONALITY.	CENSUS.							
	1911	1901	1891	1881	1871	1861

Not Stated	44	—	8	—	—	4		
Total	24,739	22,627	8,510	6,399	4,698	3,969		

In 1861 foreigners enumerated in Scotland numbered 3,969, the most numerous nationalities being Germans, 1,303; Danes, 596; and Norwegians, 504. Russians and Poles, who now collectively number 11,032, then numbered only 131, and Italians, who now number 4,594, then numbered only 119. The increase between 1861 and 1871 was 729; between 1871 and 1881 it was 1,701, and between 1881 and 1891 it was 2,111. But the increase in the period 1891 to 1901 enormously exceeded the earlier increases, and amounted to 14,117, or nearly seven times as much as the increase during the previous intercensal period. The increase of the most recent intercensal period, 2,112, is much smaller than that of the previous period, and is approximately the same as that of the period 1881 to 1891. These figures show that the large influx of foreigners which took place during the period 1891 to 1901 has not continued, and that the growth of the foreign population has again fallen to more moderate proportions. The excessive increase of foreigners during the period 1891 to 1901 is found to be largely due to increases in the numbers of Italians and of Russians and Poles, the former having then increased by

3,302, and the latter by 8,898, the previous intercensal increase of the former being 421, and of the latter, 939. The number of Germans in Scotland was also found to have largely increased during the period 1891 to 1901, the numbers in 1891 being 2,052, and in 1901, 3,232. The only foreign nationality showing a materially larger numerical increase at this census than at all previous censuses is that of citizens of the United States of America; in 1881 they numbered 539, in 1891 their number was found to have increased to 660, and in 1901 to 690, while it now amounts to 1,176.

**TABLE D.—FOREIGNERS ENUMERATED IN SCOTLAND IN 1911 AND 1901,

Not Stated	—	—	19	25	44	—	—	—	—	—
Total	2,085	32	13,624	8,998	24,739	1,804	33	12,642	8,146	22,625

Foreigners in the Shipping Population.—Of the 24,739 foreigners enumerated in Scotland, 2,117, or 8·56 per cent., were enumerated on board ship, while 22,622, or 91·44 per cent., were enumerated on shore. In 1901 the total foreign population numbered 22,625, 1,837, or 8·12 per cent., being enumerated on board ship, and 20,788, or 91·88 per cent., on shore. Thus the total has increased by 2,114, or 9·3 per

cent.; the number enumerated on board ship has increased by 280, or 15·2 per cent.; and the number enumerated on shore by 1,834, or 8·8 per cent. The absolute increase of the shipping section of this population has therefore been less, but the proportional increase larger, than that of the remainder.

Of the foreign shipping population, the largest sections are found to consist of Norwegians, 502; Swedes, 422; Danes, 335; Germans, 271; Russians and Poles, 126; and Dutch, 125; and thus the larger part of the foreign shipping population belongs to those countries which have a seaboard on the Baltic and the North Sea. These figures further show that only 389, or 54·71 per cent., of the enumerated Swedes were residents, or more strictly, enumerated on shore, the corresponding figures of the Norwegians, Danes, and Dutch being 494, or 49·60 per cent., 377, or 52·95 per cent., and 282, or 69·29 per cent., respectively. Of the 171 Chinese enumerated, 75 were enumerated on board ship, and 96 ashore.

TOTAL	42	9	51	33	25	58	38	—	38

The largest numbers of the foreign shipping population were enumerated in the Counties of Fife, 523; Edinburgh, 378; Stirling, 296; Lanark, 240; Shetland, 221; and Aberdeen, 111. In the County of Shetland only 59, or 21·07 per cent., of the total foreigners were enumerated on shore; in the County of Caithness only 19, or 45·24 per cent., of the total were enumerated on shore; in Fife only 595, or 53·22 per cent.; in Stirling only 443, or 59·95 per cent.; and in Ross and Cromarty, 22, or 66·67 per cent.

Foreigners in Institutions.—Table E has been drawn up to show the numbers of foreigners enumerated in poorhouses, lunatic asylums, and prisons. It may there be seen that 51 foreigners were found in poorhouses, 58 in lunatic asylums, and 38 in prison. The country to which the largest number of the paupers belongs is the United States, 15 of the 51 being described as United States citizens; the country to which the largest number of lunatic foreigners belongs is Russia, including Poland, these numbering 35; and the country to which the largest number of alien prisoners belongs is Italy, these numbering 10 out of the total of 38.

C.—COLONIALS.

SOME details relating to persons born in British colonies and dependencies and enumerated in Scotland are collected in Tables XII and XIII. They number in all 17,890, of whom 8,851 are male and 9,039 female. In 1901, male colonials enumerated in Scotland numbered 7,477, and female 8,430, the total amounting to 15,907. There has thus been an increase of 1,374 in the number of colonial males, of 609 in the number of colonial females, and of 1,983 in the total colonial-born section of the population.

Those born in European colonies and dependencies numbered 830, and were 35 fewer than in 1901; those born in Asiatic colonies and dependencies numbered 7,232, and were 1,187 more than in 1901; those born in African colonies and dependencies numbered 2,816, and were 1,114 more than in 1901; those born in American colonies and dependencies numbered 3,794, and were 301 fewer than in 1901; and those born in Australasian colonies and dependencies numbered 3,038, and were 160 fewer than in 1901. In the case of 180 persons the description, though indicating colonial birth, did not state the colony of birth.

Of those born in Asiatic colonies and dependencies, 6,290 were born in India, 3,349 of them being males and 2,941 females. Of these males, 2,713, and of these females, 2,931, were of European origin, while 636 males and 10 females were of other than European origin. Of those of Indian birth and of non-European origin, 264 were enumerated in Glasgow, 117 elsewhere in Lanarkshire, 106 in Edinburgh, and 71 in Dundee.

D.—NATURALISED BRITISH SUBJECTS.

IN all 1,798 persons were described in the householders' schedules as being of foreign birth but naturalised British subjects. In 1901, the corresponding figure was 1,287, and thus persons so described at this census numbered 511 more than ten years previously. Of the persons so returned in 1901, 794 were males and 493 females; males show an intercensal increase of 223, and females of 288.

Of the naturalised British subjects, 1,451 were born in Europe, 24 in Asia, 9 in Africa, and 301 in America, while in 13 instances the birthplace was insufficiently described. Compared with the corresponding figure of 1901, naturalised British subjects of European birth are 343 more; of American birth, 146 more; of Asiatic birth, 14 more; and of African birth, 4 more.

Of the 1,451 naturalised subjects of European birth, the largest numbers were born in Russia, including Poland, 591; Germany, 394; Italy, 102; Sweden, 58; France, 56; Norway, 56; Denmark, 46; Austria-Hungary, 43; and Switzerland, 43. Of the 301 naturalised British subjects of American birth, 269 were born in the United States.

E.—THE INFIRM.

IN the householder's schedule used in the taking of this census, householders were instructed to state if any person included in the schedule was (1) "Totally Deaf" or "Deaf and Dumb"; (2) "Totally Blind"; (3) "Lunatic"; or (4) "Imbecile" or "Feeble-minded"; and to add whether any such infirmity had existed from infancy. In the schedule used in the census of 1901 the instructions regarding the infirm differed from this and read thus:—"If (1) Deaf and Dumb; (2) Blind; (3) Lunatic; (4) Imbecile, Feeble-minded, write the precise infirmity, if any, as above, opposite the name of the person; and if the infirmity dates from childhood, add 'from childhood.'" The instructions at

this census accordingly differed from those of the previous census by the insertion of a heading "Totally Deaf," and by the insertion of the word "Totally" before "Blind." These differences are of some importance when considering the results, and more particularly when considering comparisons between the figures of this and of the previous census, because the difference—the use of the word "Totally"—may have led to the exclusion from the returns of this census of some infirm who would, or should, have been included, had the older instruction been continued. The change of instruction was considered desirable to get rid of a certain ambiguity in the older form, which did not state with sufficient precision the degree of blindness, or of deafness, that was referred to.

The Blind.—The number of persons returned as blind, *i.e.*, "totally blind," was 3,317, of whom 1,638 were males and 1,679 females. In 1901, the blind numbered 3,253, males numbering 1,666, and females 1,587. Thus there is an apparent increase of 92 in the number of blind females, an apparent decrease of 28 in the number of blind males, and an apparent increase of 64 in the total number of the blind. How far these observed changes are reliable, and how much is due to modification of instruction, it is impossible to say.

Of the 3,317 blind persons enumerated, 181, or 5·5 per cent., were returned as being blind from infancy, and, per contra, 3,136, or 94·5 per cent., as afflicted with acquired blindness. In 1901, 492, or 15·1 per cent., of the blind were returned as having been blind from childhood, and 2,761, or 84·9 per cent., as being afflicted with acquired blindness. Thus the apparent intercensal change is an increase of 375 in the number afflicted with acquired blindness, but an apparent decrease of 311 in the number congenitally blind. How far these comparisons are affected by the alteration of the instruction, it is again impossible to estimate.

Of the 3,317 blind persons, 63 were returned as being also deaf, 12 as being also dumb, 40 as being also lunatic, and 26 as being also imbecile.

Of the blind, 238, or 7·2 per cent., were enumerated in special institutions for the blind.

Deaf and Dumb.—The number of persons returned as deaf and dumb was 2,369, as totally deaf but not dumb, 1,656, and as dumb but not deaf, 297. Thus 4,322 in all were afflicted with the want of either hearing, or speech, or both. In 1901, the corresponding total was 3,756, and there thus has been an increase in this number, and this notwithstanding the alteration in the instruction. The increase, however, is small, and may be a mere fluctuation. In 1901, persons returned as deaf and dumb numbered 2,427, as deaf but not dumb, 1,118, and as dumb but not deaf, 211. There is thus an apparent decrease of 158 in the number of the deaf and dumb, but an apparent increase of 538 in the number of those who are deaf but not dumb, and one of 86 in the number of those who are dumb but not deaf.

Of the total number of the deaf, 63 were returned as also blind, 35 as also lunatic, and 30 as also imbecile. Of the total number of the dumb, 12 were returned as also blind, 20 as also lunatic, and 130 as also imbecile. One male was stated to be deaf, blind, and imbecile, and one to be dumb, blind, and imbecile; while one female was stated to be blind, imbecile, deaf and dumb.

Of the 4,025 deaf persons, 1,943 were males, and 2,082 females, the former being 221, and the latter 259, more than in 1901. At both censuses the deaf females have exceeded the deaf males; in 1901 this excess was 101, and it is now found to be 139. Of the 2,666 dumb persons, 1,410 are males, and 1,256 females, the former exceeding the latter by 154, the reverse of what is found among the deaf. A similar difference was found in 1901. Dumb males are the same in number as in 1901, while dumb females show an apparent increase of 28.

Of the 2,369 deaf and dumb persons, 549, or 23·2 per cent., were enumerated in special institutions for those so afflicted.

Lunatic, Imbecile, and Feeble-minded.—Of all the census returns those dealing with the numbers of mentally infirm persons are probably the least satisfactory. This is so for two reasons. One is the dislike of householders, and more particularly of those who are parents, to admit the existence of mental infirmity in their households or families, and the other a confusion that exists regarding the significance of the terms used—lunatic, imbecile, and feeble-minded. There is, in fact, too much room for the individual opinion of the householders, and too great a probability of many persons who should be described as mentally infirm not being so returned.

For instance, in the case of a person slightly mentally infirm—say suffering from mild

senile dementia, or from a mild mental neurasthenia—it rests with the householder to decide whether he should be described as mentally infirm—*i.e.*, as lunatic, as feeble-minded or as imbecile—or excluded from the category of infirm; and as such a decision would in many cases puzzle experts, it is only reasonable to discount the value of the householders' decisions in such matters. No doubt the returns of "lunatics" and "imbeciles" include all certified cases and some others, but—assuming an arbitrary standard of intelligence below which all should be described as mentally infirm—the difficulty is to estimate the proportion which these "others" bear to the total who should come within the category of mentally infirm. It is probable, however, that the error arising from imperfect returns, due to want of precise limit and definition in the terms used, and to the absence of skilled knowledge on the part of householders, has been more or less the same in this and in the previous census, when the instruction to the householder regarding the mentally infirm was similarly worded, and this being so, even if the returns be incomplete and unreliable as a measure of the absolute number of mentally infirm, they may be used as an approximate indication of any marked intercensal change in the number.

The other reason why the returns regarding the number of mentally infirm persons are unsatisfactory is due to the risks arising from the confusion of terms. The terms themselves are not defined in the scheduled instruction. This was scarcely possible; but the term "lunatic" is intended for use in cases where the infirmity has been acquired during life, while the terms "imbecile" and "feeble-minded" are intended for use in cases where the infirmity has existed from birth, or from an early age, the former being applied to the more extreme cases, and the latter to the milder. An examination of the returns, however, provides ample evidence that these distinctions have not been uniformly made. Two points may be mentioned as indicative of this confusion, the one being the age distribution of persons returned as "imbecile" or "feeble-minded," and the other their former occupations. It is a well-established fact that imbeciles are subject to a higher death-rate than the general population, and, as all imbecility dates from childhood, it is evident that the ratio of the number of imbeciles to the general population should decrease as the age advances. Precisely the opposite, however, is found in the Census returns, for not only is the ratio found not to be a diminishing quantity, but it is a markedly increasing quantity. It is less than 1 per thousand in age groups under 10, rises to nearly 2 per thousand in age group 15 to 19, is between 1·7 and 1·9 in age groups between 20 and 50, and thereafter steadily increases, exceeding 2·5 in age group 65 to 69, and exceeding 4·0 in age group 75 to 79. Figures such as these clearly show that the terms "imbecile" and "feeble-minded" are applied to cases in which the mental infirmity has arisen, not at an early age, but in middle and advanced life. A study of the former occupations of those returned as imbecile or feeble-minded demonstrates the same confusion, for while it is reasonable to assume that those who are mentally infirm from childhood are incapable of qualifying for a learned profession, or for a skilled trade, the returns include many examples of these infirm being reported to have had such occupations. For instance, the list of those returned as "imbecile" or "feeble-minded" includes an officer of the Royal Navy, two ministers of the Established Church of Scotland, an advocate, two sick nurses, a school mistress, and a very considerable number with other occupations requiring skill and technical knowledge.

From these considerations it is evident that the numbers returned as mentally infirm should not be accepted as an accurate measure of the frequency of the infirmity, and further that much reliance should not be placed on the division of the infirm into those described as "lunatics," and "imbeciles" or "feeble-minded," respectively.

In all 23,630 persons have been returned as being either lunatic or imbecile or feeble-minded; 15,719, or 66·5 per cent., being returned as lunatic, and 7,911, or 33·5 per cent., as imbecile or feeble-minded. In 1901 those returned as mentally infirm collectively numbered 20,291; 13,668, or 67·0 per cent., being returned as lunatic, and 6,623, or 33·0 per cent., as imbecile or feeble-minded. There is thus an apparent intercensal increase of 3,339, or 16·5 per cent., in the total number; of 2,051, or 15·0 per cent., in the number of lunatics, and of 1,288, or 19·4 per cent., in the number of imbeciles or feeble-minded; but to what extent these apparent increases are real, and to what extent merely due to wider recognition of mental infirmity on the part of the householders, is a question which cannot be answered from information provided by the census.

Of the total number returned as mentally infirm, 11,688 were male and 11,942 female, the former being 1,974, or 20·3 per cent., more than in 1901, and the latter

1,365, or 12·9 per cent., more. Of these males, 7,701, or 65·9 per cent., were returned as lunatic, and 3,987, or 34·1 per cent., as imbecile or feeble-minded; the former are 1,233, or 19·1 per cent., more than in 1901, and the latter, 741, or 22·8 per cent., more. Of the females, 8,018, or 67·1 per cent., were returned as lunatics, and 3,924, or 32·9 per cent., as imbecile or feeble-minded, the former being 818, or 11·4 per cent., more than in 1901, and the latter 547, or 16·2 per cent., more. Thus the apparent increase of mental infirmity has been greater in the male than in the female sex, and in both sexes it is found that the apparent increase in the number of imbeciles and feeble-minded has been relatively greater than in the number of lunatics.

Of the total number returned as lunatics, 15,147, or 96·4 per cent., were enumerated in institutions for the insane, *i.e.*, in lunatic asylums and licensed lunatic wards of poor-houses; and of the total number returned as imbecile or feeble-minded, 531, or 6·7 per cent., were enumerated in institutions for imbeciles.

Age Distribution of the Infirm.—The age distribution of the infirm is shown in Tables XX and XXI, and from the figures there given the proportion of the infirm in each 1,000 of the population of various age groups has been calculated. These proportions are collected in Table F. The corresponding proportions of the 1901 census have also been calculated, and are collected in Table G.

The frequencies of the infirmities at all ages, expressed as the rate per 1,000 of the total population, are found to be:—mental infirmity, including lunacy and imbecility, 4·96; deafness, 0·85; blindness, 0·70; and dumbness, 0·56. Of the 4·96 mentally infirm in each 1,000 of the population, 3·30 were returned as lunatics, and 1·66 as imbeciles or feeble-minded. Of the 0·85 deaf, 0·50 were returned as also dumb, and of the 0·56 dumb, 0·50 were returned as also deaf.

In the age groups, the proportion of mentally infirm is found to increase as the age of the groups increases. Thus the rate is below 1 per 1,000 in age group over 5 but under 10, but is over 2 per 1,000 in age group over 15 but under 20, over 5 in age group over 25 but under 35, over 10 in age group over 45 but under 55, and reaches a maximum of 18·97 in age group over 85.

The age distribution of the deaf is found to be very similar, the rate of deafness increasing as the age increases. In age group over 5 but under 10 this rate is 0·66 per 1,000, in age group over 35 but under 45 it is 0·96 per 1,000, and thereafter it steadily increases, becoming 1·14 in age group over 45 but under 55, 1·28 in age group over 55 but under 65, 1·62 in age group over 65 but under 75, 2·25 in age group over 75 but under 85, and 3·20 in age group over 85.

TABLE F.—CENSUS 1911.—RELATIVE FREQUENCY OF INFIRMITIES
PER 1,000 OF THE POPULATION AT EACH AGE GROUP.

INFIRMITY.	AGE GROUPS.												ALL AGES.
	Under 5 Years.	5-9	10-14	15-19	20-24	25-34	35-44	45-54	55-64	65-74	75-84	85 and over.

Lunatic . . .	0·002	0·008	0·023	0·428	1·304	3·192	6·161	8·284	9·058	9·164	7·000	5·479	3·056
Imbecile or Feeble-minded	0·098	0·712	1·351	1·702	1·509	1·593	1·745	2·066	2·381	2·882	3·693	6·671	1·481

The age distribution of the blind also varies in the same way, the relative frequency increasing as the age increases, but with this difference that in youth blindness is a rarer infirmity than deafness, the frequency increasing more rapidly with age. Accordingly, more blind persons than deaf persons are found in the older age groups. In age group over 5 but under 10 the proportion of blind is 0·17 per 1,000 of the population, in age group over 15 but under 20 the ratio is 0·29; in age group over 25 but under 35, 0·42; in age group over 45 but under 55, 1·11; in age group over 75 but under 85, 7·11; and in age group over 85, 11·86.

The age distribution of the dumb is essentially different. The highest rate, 0·80 per 1,000 is found in age group over 10 but under 15, while in all older age periods it is less, varying from 0·55 in age group over 25 but under 35, to 0·72 in age group of over 85. The age distribution of the deaf and dumb generally follows that of the dumb, and is characterised by an absence of increase with increasing age.

The relative frequency of the four infirmities, blindness, deafness, dumbness, and mental infirmity, as age varies, is shown in a simple manner in the following short table which gives the frequencies of each infirmity per 1,000 of the general population at three characteristic age periods, the first that of youth, the second that of middle age, and the third that of older age.

INFIRMITY.	AGES 10-15	AGES 35-45	AGES 65-75
Blind	0·2	0·6	3·1
Deaf	0·8	1·0	1·6
Dumb	0·8	0·6	0·6
Mentally infirm	1·5	7·6	12·5

Distribution of the Infirm by Birthplace.—For the purpose of studying the geographical distribution of the infirm, and the proportion of the infirm in localised communities, the place of enumeration is of little service, and often misleading, because of the frequent removal, for the purpose of care or treatment, of the infirm from their county, or burgh, or parish, of usual residence, to some other county, burgh, or parish. And it is for this reason that the birthplaces of the infirm, instead of the places of their enumeration, are here taken as a basis for the study of their distribution.

The relative proportions of the infirm to the general population, and to the sections of the population with birthplaces in the individual counties, are shown in Table H. In the preparation of this Table, the figures which appear against the counties in Tables XVIII and XIX, were adjusted so as to include their due proportion of cases in which the county of birth was unstated. This course was rendered necessary by the fact that as regards many of the infirm, especially the lunatics, the county of birth was not

stated. Had this adjustment not been made, the county rates would have been correspondingly less than their true, or approximately true, amounts. In the case of the mentally infirm, without this adjustment the errors would have averaged fully 7 per cent.

The rates in Table H must be used with caution, and cannot be accepted as very dependable, for two reasons. In the first place, as already pointed out, the census records dealing with infirmities are not altogether reliable, but are, without doubt, loaded with considerable error; and, in the second place, many of the rates are based on small numbers, and may be greatly influenced by the variations, or errors, of sampling. No attempt has been made to allow for the first of these two factors, but some attempt has been made to allow for the second, and this has been done in the following manner. The national rate applicable to each infirmity was arbitrarily taken as a probability, and for these probabilities the standard deviations of sampling were calculated for each county population, and by loading the national rate with three times the county standard deviation "Limits of an Expectation Rate" were obtained for each county, these limits being the limits between which the county rate would be found to lie, provided the frequency of the infirmity in the county was not essentially different from that in the entire country. For instance, the national rate of mental infirmity is found to be 4.963 per 1,000, and from this the probability of being mentally infirm (p) may be taken as 0.004963, and the probability of not being mentally infirm (q) as 0.995037. Using these figures, it is found that if these probabilities held good for those born in the County of Haddington, who number 46,165, the mental infirmity rate would be found to be something between 3.982 and 5.944 per 1,000. The ascertained rate, however, is 6.737 per 1,000, and is greater by 0.793 than the higher limit of the "Expectation Rate," and is therefore accepted as indicative of mental infirmity being more frequent among those born in the County of Haddington than throughout Scotland. The test, the use of three times the standard deviation of sampling, may be a severe one, but its adoption may be justified by the unsatisfactory nature of the original returns.*

The frequency of blindness in the general population of Scotland is found to be one in 1,435, or 0.70 per thousand. This rate is found to vary within fairly wide limits in the sections of the population born in the individual counties, but the application of the test above explained shows that few of the apparent differences are of real significance. High rates are found among those born in Ross and Cromarty, 1.70 per 1,000; Sutherland, 1.41 per 1,000; Shetland, 1.27 per 1,000; and Inverness, 1.14 per 1,000; and low rates among those born in Selkirk, 0.41 per 1,000; Nairn, 0.44 per 1,000; Edinburgh, 0.45 per 1,000; Kincardine, 0.45 per 1,000; and Linlithgow, 0.46 per 1,000. The test of loading these rates with three times the standard variation of sampling shows that the rates of the counties of Inverness, Shetland, Sutherland, and Ross and Cromarty are significantly greater than that of the general population, and that the rate of the county of Edinburgh is significantly less, but that none of the other county rates are significantly different from that of the general population.

The rate of deafness in the general population is 0.85 per 1,000, or one in every 1,180, and varies from 2.20 per 1,000 in the case of those born in Bute, 1.34 among those born in Shetland, 1.15 among those born in Clackmannan, and 1.05 among those born in Kinross, to 0.45 among those born in Elgin, 0.47 among those born in Peebles, and 0.49 among those born in Kirkcudbright and Orkney. The application of the adopted test of significance, however, shows that, with the one exception of Bute, none of these county rates are significant of real difference, because in all, with that one exception, the maximum or minimum limits of the county rates overlap those of the national rate. The rate of deafness in Bute is found to be something between 2.90 and 1.50 per 1,000, and as the national rate is between 0.88 and 0.81, there appears to be a significant difference.

The rate of dumbness in the general population is found to be 0.56 per 1,000, or one in every 1,786. This rate shows variations extending from 1.62 among those born in Bute, and 1.07 among those born in Shetland, to 0.13 among those born in Peebles, and 0.23 in Kirkcudbright. But, as in the case of the deaf, the differences, that of Bute excepted, are

* The standard deviation of sampling was found from this well-known formula— p and q being as stated, and n being the number of persons born within the county— $S = \left(\frac{p \cdot q}{n}\right)^{\frac{1}{2}}$. The use in this manner of the standard deviations of sampling for the purpose of determining the significance of a series of rates is believed to be original, and to test the reliability of the method the significance of the county rates of mental infirmity was also determined by the method of comparing observed differences with the standard errors of these differences. The results were found to be identical. Preference was given to the method adopted because of the simplicity of the tabulated results.

TABLE H.—RELATIVE FREQUENCY OF INFIRMITIES ACCORDING TO THE BIRTHPLACES OF THE POPULATION.

NOTE.—In calculating the Rates in this and the following Table, the number of Persons of Unstated Birthplaces in the Total Population and among the Infirm have been respectively distributed *pro rata* among the various Counties.

* See explanatory reference in text.

† The numbers entered against Scotland refer to the totals enumerated, irrespective of birthplace.

Of the general population, one in every 201, or 4·96 per 1,000, was returned as mentally infirm, *i.e.*, either lunatic, imbecile, or feeble-minded. The county rates vary within fairly wide limits, and as 21 of them are found to be significantly different from the national rate, a special table (J) has been constructed showing the application of the test of significance. The highest rates per thousand are found in Inverness, 9·19; Argyll, 8·75; Nairn, 8·41; Ross and Cromarty, 8·10; Shetland, 7·84; Bute, 7·50; and Sutherland, 7·41; and the lowest in Linlithgow, 3·35; Banff, 3·50; Dumbarton, 3·72; Clackmannan, 3·86; Lanark, 3·92; Stirling, 3·92; and Renfrew, 3·97. The counties in which the rate of mental infirmity is found to be significantly greater than the national rate include Argyll, Bute, Caithness, Dumfries, Elgin, Forfar, Haddington, Inverness, Nairn, Orkney, Perth, Ross and Cromarty, Shetland, and Sutherland, and those in which this rate is significantly less than the national rate include Ayr, Banff, Dumbarton, Lanark, Linlithgow, Renfrew, and Stirling. This distribution is not without interest. Scotland is sometimes divided into a Highland portion and a Lowland portion by a line running from the mouth of the Dee in a south-westerly direction to the Mull of Kintyre, counties to the north-west of the line being grouped as Highland counties, and those to the south-east of the line as Lowland. Using this division, it is found that there are thirteen Highland counties and twenty Lowland counties. Of the former all except one, Banff, are found to be subject to a significantly high mental infirmity rate; while of the latter only three have a high rate, while six have a significantly low rate, and eleven are subject to a rate not significantly different from the national rate. There are in all fifteen counties with significantly high mental infirmity rates, and seven with significantly low. The former—Haddington, Dumfries, and Forfar excepted—are all Highland; while the latter—Banff excepted—are all Lowland. Six of the counties with low mental infirmity rates are contiguous; they are Lanark, Dumbarton, Stirling, Linlithgow, Renfrew, and Ayr.

The occupations, or former occupations, of the infirm are dealt with in Table XXII, which table is inserted in this volume more for reasons of continuity with previous census reports than for any reasons of inherent administrative importance or specific interest. It is for the same reason that Table XXIV, dealing with the occupations and former occupations of inmates of poorhouses, prisons, and common lodging-houses, has been prepared and published.

F.—FERTILITY OF MARRIAGE IN SCOTLAND.

THIS is the first Scottish census in which householders were required to give information relative to the fertilities of existing marriages. The questions under this head in the Census Schedule were three in number; the first asked the duration of the existing marriage, the second the number of children born alive to the marriage, and the third the number of children of the marriage still living.

There are obviously four variables which must be taken into consideration in any calculation regarding the fertility of marriage—the duration of the marriage, the age of the wife at the time of marriage, the age of the husband at the time of marriage, and the number of children born to the marriage. Information regarding the first of these variables, the duration of the marriage, is provided by the answers to the first of the three scheduled questions; that regarding the second, the age of the wife at the time of marriage, is ascertainable by deducting the years of duration of the marriage from the reported present age of the wife; that regarding the third, the age of the husband at the time of marriage, is similarly deducible from the duration of marriage and the husband's present age; and that regarding the fourth, the number of children born to the marriage is provided by the answers to the second question.

The total number of married women enumerated in Scotland amounted to 762,835, and for each of these, with few exceptions, answers to the three fertility questions were given. All these cases were not, however, available for tabulation, because a considerable number of the married women were not returned on the same schedules as their husbands—no doubt in many instances due to the temporary absence of the husbands from home on Census Day—and such cases had to be excluded from the study because one of the variables, the age of the husband at marriage, was not ascertainable. Deductions from the total also fell to be made in respect of marriages in which the wives at the time of marriage were of such ages—over 45—that no fertility could reasonably be expected, such marriages obviously being useless for the purposes of a fertility enquiry. Age forty-five throughout this study has been taken as an arbitrary limit of the fertile period of a

woman's life, and, although this limit may not be in strict accordance with physiological fact, it is defensible for working purposes, because the few and exceptional instances of fertility after age forty-five are quite insufficient to affect the general result. A further small number of cases were necessarily omitted on account of evident confusion and unreliability in the answers; these were mostly cases where there was clear evidence that children by previous marriages, or children born prior to wedlock, had been counted along with children born to the particular marriage under question. For instance, where a woman aged forty-three was returned as having been married for two years, and as being the mother of six children, such a marriage was excluded.

The effect of these deductions has been to reduce the total number available for tabulation from 762,835 to 680,684, the excluded marriages numbering 82,151. The reduced figure, however, is amply sufficient for the purposes of a biological study, and, as it amounts to nearly 90 per cent. of the total number of married women enumerated, it may be accepted as satisfactorily significant of the actual fertility of Scottish marriages.

The total number of children born alive to the 680,684 marriages included in the study was 2,728,235, or an average of 4.01 children per marriage. A statement such as this, however, is of little interest or value, because widely varying quantities are included in the average, and great elaboration of tabulation has been necessary to obtain figures on which reliable deductions may be founded for the purpose of illustrating the influence of any particular factor upon the size of the average family.

Doubtless the principal factor influencing the number of children born to a marriage is the length of the continuance or duration of the marriage during the fertile period of the wife's life. The longer that duration, the greater will be the probable size of the family, and as that duration varies inversely as the age of the woman at marriage, the younger she is at marriage, the longer will be the period of possible fertility, and consequently the greater the probable number of children.

But there are also secondary factors influencing fertility, and as it is as much with these as with the principal factor—the duration of the marriage—that this study is concerned, the scheme of tabulation has been devised accordingly in order to meet these. Among these secondary factors the following may be mentioned:—the fertile power of men and women at varying ages, and the influence of class or occupation.

To obtain homogeneous results from the particulars relating to the 680,684 marriages, a very elaborate and lengthy tabulation was required, and so bulky are the resulting tables—they would extend to some thousands of printed pages—that their publication has been rendered a practical impossibility, and resort has been had to publishing abstracts of them only. The original tables, though unpublished, will be preserved in the Registrar-General's Department, and will be available for purposes of statistical study to any interested in them.

As publication by abstract in place of publication in full has been adopted, a short explanation of the leading features of our scheme is necessary, as a guide to the reader.

The original tabulation consisted in counting the number of marriages for each possible combination of the four factors or variables to which we have already alluded, viz., the duration of marriage, the age of the wife at the time of marriage, the age of the husband at the time of marriage, and the number of children born to the marriage. For this purpose, a series of approximately 1,500 tables was required, each showing for one given combination of the duration of marriage and the age of the wife at marriage, the number of children born to the marriage in correlation with the age of the husband at marriage. By transcription, this original tabulation was converted into a second series of tables, of about the same length as the original, in which each table shows, for one given combination of age of husband at marriage and duration of marriage, the number of children born, in correlation with the age of the wife at marriage.

The method adopted for the abstraction, or summarising, of these two lengthy series of tables, was that of the elimination firstly of one variable and afterwards of another. Thus, Table XXXIII is a summary of the original tabulation in which the variable of the age of the husband has been eliminated, and consequently the figures show the number of families of specified size in correlation with the age of the wife at marriage and the duration of marriage, but without taking into account the age of the husband at marriage. Table XXXIV is a summary of the original transcript, the figures in it showing the number of families of specified size in correlation with the age of the husband at marriage and the duration of marriage, but without taking into account the age of the wife at marriage. The variable eliminated from Table XXXII, which is the most comprehensive of these abstract tables, is that of the specified number of children resulting from the marriages—a

statement of the average size of family resulting from marriages of specified durations between men and women of specified ages at the time of marriage being substituted.

These Tables, XXXII to XXXIV, are further summarised in Tables XXVI to XXXI by the elimination of a second variable. They consequently each deal with two variables only. Thus from Table XXVI the eliminated factors are the duration of marriage and the number of families of specified size, and the figures indicate the average size of family for each combination of age of husband and wife at time of marriage, and the numbers on which these averages are founded. Table XXVII gives similar information for each combination of duration of marriage and age of wife at marriage, and Table XXVIII for each combination of duration of marriage and age of husband at marriage, the variables eliminated from the former being the age of the husband at marriage and the specified number of children in each family, and from the latter the age of the wife at marriage and the specified number of children in the family.

Tables XXIX, XXX, and XXXI are general summaries giving the specified number of children in the families in correlation with one other variable only; in Table XXIX this other variable is the age of the wife at marriage, in Table XXX it is the age of the husband at marriage, and in Table XXXI it is the duration of marriage.

The variable of the duration of marriage has been eliminated from Tables XXXV, XXXVI, and XXXVII in a special manner, for these tables deal not with all recorded marriages, but only with those in which the fertile period of the wife's life has been completed, and in which, for any combination of age of wife and husband at marriage, duration is a matter of only secondary importance. These tables thus deal with the total families resulting from marriages between husbands and wives of specified ages at the time of marriage. Table XXXV gives the average size of family in correlation with the ages of the parents at the time of marriage; Table XXXVI the number of families of specified size in correlation with the age of the wife at the time of marriage; and Table XXXVII the same information in correlation with the age of the husband at the time of marriage.

No attempt is made in the text which follows to give a full, far less an exhaustive, description of all the information to be found in these abstract tables. Instead of attempting such a description, a few points of more special interest have been selected, and are dealt with *seriatim*.

Before dealing with these points it is only right to draw attention to a matter which affects to a greater or less degree all the calculations, and which is an apparent confusion in the minds of the householders in answering the question as to the duration of marriage. That there has been confusion is evident when the recorded numbers of marriages of specified durations are compared. Thus, recorded marriages of which the duration is reported to be less than one year number 16,755, while those of which the duration is reported to be more than one but less than two years number 26,974; marriages of more than ten but less than eleven years' duration number 2,928 more than marriages of over nine but less than ten years, and 3,215 more than marriages of over eleven but less than twelve years, while a similar anomaly is found in marriages of a duration more than twenty but less than twenty-one years. In short, there is a crowding of figures round certain selected durations similar to the crowding found round certain ages in a single ages tabulation, and referred to in the second volume of this Report.

Another consideration that must not be lost sight of, and which has a bearing on the conclusions derivable from these tabulations, is that the tabulations deal exclusively with marriages which have continued up to the completion of stated periods, while in fact a certain proportion of marriages do not continue so long, but are discontinued by the death of one or other of the spouses, or by separation or divorce. For instance, it is ascertained by the tabulation that the average size of the total family resulting from the marriage of a man of thirty with a woman of twenty-six is slightly over five children, but this figure is no doubt greater than would be found were it possible to ascertain the size of all families resulting from the union of men and women of these ages, and is so because there is no doubt that in a proportion of them the death of one parent, or separation or divorce, limited the size of family. Were it possible to include these discontinued marriages, the general average would be found to be somewhat, if not considerably, less.

The Chance of a Marriage being Childless.—The tabulation deals with 239,943 marriages in which the wife was of child-bearing age at the time of marriage, and which continued till the end of the woman's child-bearing period of life, and of these marriages 27,478, or 11·5 per cent., are childless. This percentage varies with the age of the wife at the time of marriage, the younger the wife the smaller being the percentage.

Among marriages in which the wife at the time of marriage was aged 22 or under, childless marriages constitute less than 4 per cent. of the total; and among those in which the wife is aged 17 to 19, less than 3 per cent. But as the age of the wife at marriage advances the rate increases; it is 7 per cent. for age 25; 10 per cent. for age 28; 13 per cent. for age 30; 25 per cent. for age 35; 57 per cent. for age 40; and over 80 per cent. in marriages where the wife was aged 43 at the time of marriage.

The figures collected in Table XXXIII enable estimates to be made of the proportions which childless marriages constitute in those groups of marriages in which all the wives were of similar age at the time of marriage, not only when the fertile period of marriage has been completed, but also after specified durations of marriage. These proportions were calculated for each year of the wife's age at marriage, but on account of the relatively small numbers available for the individual calculations, due to the large amount of subdivision, the resulting figures were found to be too variable, and for smoothness of result it was found desirable to combine the figures over a group of years of the wife's life. The group selected was that of all wives whose ages at marriage ranged from 20 to 25 inclusive. Of each thousand of these marriages 733 were found to be childless at the end of the first year of marriage; 367 at the end of the second year of marriage; 159 at the end of the third year; 106 at the end of the fourth year; 91 at the end of the fifth year; 84 at the end of the sixth year; 74 at the end of the seventh year; 67 at the end of the eighth year; 64 at the end of the ninth year; 60 at the end of the tenth year; and 53 at the end of the period of possible fertility.

TABLE K.—PROBABILITY OF FERTILITY AFTER VARYING STERILE PERIODS.
(WIVES AGED 20-25 AT MARRIAGE).

DURATION OF MARRIAGE	In 1,000 MARRIAGES			In Marriages previously Childless, Probability of Birth of Child

9 " " 10 " "	60	940	4	0.06	0.17
10 to end of fertile period	53	947	7	—	0.12

From the same group of figures it may be gathered that out of one thousand marriages of women of ages between 20 and 25, a first child is born during the first year of marriage in 267 instances; during the second year in 366; during the third year in 208; and during the fourth year in 53; the figures for the subsequent years being much smaller and approximately falling to zero after the tenth year.

The same series of figures also enables calculations of the chance of marriages that are childless at the end of any specified number of years of marriage remaining childless to the end of the fertile period, or at any stated period. Thus of each thousand marriages of women between 20 and 25 years of age at marriage, 733 are childless at the end of the first year; 367 at the end of the second; and 53 at the end of the period of possible fertility of the women's lives. These figures show that the chance of marriages that are childless at the end of the first year remaining childless at the end of the second year is $367 \div (367 + 366)$, or 0.50, and the chance of remaining childless to the end of the period of possible fertility $53 \div (53 + 680)$, or 0.07. The complements of these chances represent the chances of fertility; thus 0.50 is the complement of the chance of marriages that

are childless at the end of the first year of marriage remaining childless during the second year, and represents the chance of the birth of a first child among such marriages during that year; and 0·93 is the complement of the chance of such marriages remaining childless to the end of the period of possible fertility, and represents the chance of the birth of a child at some subsequent date among marriages that are childless at the end of the first year. Figures showing these chances are collected in Table K, and it may there be seen that the chance, or prospect, of a first child rises from 0·27 in the first year of marriage to 0·57 in the third, and thereafter decreases, falling below 0·20 in the fifth year, and below 0·10 in the tenth year. The chance of a marriage childless at the end of the first year remaining childless throughout the entire period of possible fertility of the woman's married life is 0·07, while the chance of at least one child is 0·93; and the longer the duration of the childless period, the greater is the chance of complete

35-39	49·40	33·70	15·70	0·32

sterility, or, conversely, the less the chance of a child being born thereto. The chance of a marriage that is childless at the end of the second year remaining sterile is 0·14; of one childless at the end of the third year, 0·33; at the end of the fourth year, 0·50; at the end of the fifth year, 0·58; at the end of the eighth year, 0·79; and at the end of the tenth year, 0·88. On the other hand, the chance of the birth of a child at some subsequent date among marriages that are childless at the end of the first year is 0·93; among those childless at the end of the second year, 0·86; at the end of the third year, 0·67; at the end of the fourth year, 0·50; at the end of the seventh year, 0·28; and at the end of the tenth year, 0·12.

Among the childless marriages included in this group—*i.e.*, where the wife was

aged 20 to 25 at the time of marriage—if the duration of marriage is less than five years, the chance of there being a child at some subsequent time is greater than that of the marriage remaining childless, while, if the duration is five years, the chances are nearly level, and in longer durations are reversed, the chance of remaining childless being greater than that of having a child.

Table L has been constructed to show how the chance of a first child being born after three years of marriage is affected by the age of the wife at marriage. It may there be seen that the older the wife at the time of marriage the less is the chance of a first child being born after that period of marriage has elapsed. Among wives whose ages at marriage were between 15 and 19, this chance averages 0·73, and varies between 0·67 and 0·86; among those whose ages at marriage were between 20 and 24, it averages 0·70, and varies between 0·68 and 0·72; among those whose ages at marriage were between 25 and 29, it averages 0·65, and varies between 0·59 and 0·68; among those whose ages at marriage were between 30 and 34, it averages 0·54, and varies between 0·46 and 0·61; and among those whose ages at marriage were between 35 and 39 the chance averages 0·32, and varies between 0·28 and 0·39. In marriages which are childless for three years, and in which the age of the wife at the time of marriage did not exceed 32, the chance of the marriage remaining childless after the expiration of three years, is less than the chance of a child being born at some subsequent date, but where the age of the wife at the time of marriage exceeded 32, the chance of the marriage remaining childless is greater than that of the birth of a child.

The Chance of there being One, Two, or more Children.—These probabilities have been calculated from the figures in Table XXXVI, which represent the number of families of specified sizes resulting from the marriage of women of specified ages at the time of marriage. Only marriages in which the fertile period has been completed are dealt with in that table, and are here considered. These probabilities are collected in Table M, where they are expressed as the chance of the specified number of children or more being born. Thus, from Table XXXV it is ascertained that in 19,422 marriages of women of 23 years of age at the time of marriage—which marriages continued to the end of the fertile period—the family amounts to three or more children in 16,998 instances, and the chance of at least that number of children being born is thus found to be $16,998 \div 19,422$, or 0·88.

The chance of there being at least one child is the complement of the chance of marriage being childless, and decreases as the other chance increases. The chance of marriage being childless is small when the wife is young at the time of marriage, and becomes greater as the age of the wife at marriage increases, and, conversely, the chance of there being at least one child is large when the wife is young at the time of marriage, and becomes less as the age of the wife at marriage increases. If the wife is aged less than 20 at the time of marriage this chance is found to be more than 0·97; at age 20 it falls to 0·96; at age 25 to 0·93; at age 30 to 0·87; at age 35 to 0·75; and at age 40 to 0·43. An even chance of there being at least one child occurs at an age between 39 and 40. A chance of two to one against the birth of any child occurs when the age of the wife at marriage is about 41; one of three to one against when that age is 42; and one of four to one against when that age is 43.

The chances of there being two, three, four, or more children all vary in the same manner—the younger the wife the greater the chance of at least a specified number of children. Thus, the chance of there being four or more children is at a maximum (0·90) when the wife is 17 or 18 at the time of marriage; falls to 0·75 for age of wife 25; to 0·50 for age of wife 31; and to less than 0·10 for ages of 38 and over; and the chance of there being eight or more children falls from a maximum of 0·70 at age of wife at marriage 17, to below 0·50 at age 22, below 0·25 at age 26, and below 0·10 at age 30.

The chance of there being at least ten children is found to be 0·51 in marriages in which the wife was 17 at the time of marriage, to fall below 0·25 for age 22, and below 0·10 at age 25. The chance of there being thirteen children—the largest family dealt with in Table M—is small; at age 17 it is only 0·16, and falls below 0·10 at age 19.

Looking at the probabilities collected in Table M, it may be seen that, provided the marriage continues to the end of the fertile period of the woman's life, there is a level chance of a young woman marrying at 17 being the mother of at least 10 children, and that as the age of the wife at marriage advances the level chance applies to a smaller sized family. Thus, this chance in the case of a woman marrying at 20 is that she will be the mother of at least 9 children; for age of wife 25, at least 6 children; for age of wife 30, at least 4 children; for age of wife 35, at least 2 children; and for age of wife 40, at least one child.

* By moving the decimal point two places to the right, the values in this and the following Table may be read as rates per cent. Thus, of wives aged 20 at marriage, 96.4 per cent. had 1 child or more, 94.2 per cent. had 2 children or more, and so on.

There is similarly found to be a two to one chance in favour of a woman marrying at 37 being the mother of at least one child ; and there is the same chance of at least 2 children when the woman marries at 34 ; of at least 3 children when she marries at 31 ; of at least 4 children when she marries at 28 ; of at least 5 children when she marries at 25 ; of at least 6 children when she marries at 22 ; and of at least 7 children when she marries at 20.

Taking a chance of ten to one against as a limit beyond which an event may be described as very improbable, it is found that a family of 2 children is very improbable when a woman marries at over 42 ; of 3 children when that age is over 40 ; of 4 children when over 38 ; of 5 children when over 36 ; of 6 children when over 34 ; of 7 children when over 31 ; of 8 children when over 29 ; of 9 children when over 27 ; and of 10 children when over 25.

The Chance of a Family being Limited to One, Two, or more Children.—These chances—which are collected in Table N—are the complements of the chances of there being at least one child more than any given number. Thus, the chance of a bride of 20 becoming the mother of at least 4 children, assuming that the marriage continues to the expiration of the child-bearing period of her life, is 0.88, and

the complement of this figure, 0.12, is the chance of the family not exceeding 3 children. This being so, it follows that the chance of a family being limited to a specified number of children varies with the age of the wife at marriage, in the same manner as the chance of sterility.

There is found to be a level chance of 9 children being the limit when the wife at marriage is aged 17; of 8 children being the limit when that age is rather less than 20; of 7 children when that age is rather less than 22; of 6 children when that age is between 23 and 24; of 5 children when that age is between 25 and 26; of 4 children

* See Note to Table M.

when that age is between 28 and 29; of 3 children when that age is about 31; of 2 children when that age is rather less than 34; and of one child when that age is between 36 and 37.

Similarly it is observed that the chance of the family exceeding 10 children is never more than one third, or two to one against, no matter how young the wife at marriage. The same chance, one-third, or two to one against, is found that the family will not exceed 9 children when the wife is aged 20 at marriage; that it will not exceed 8 children when she is aged 22, not exceed 7 children when she is aged 24, not exceed 6 children when she is aged 26, not exceed 5 children when she is aged 29, not exceed 4 children when she is aged 31, not exceed 3 children when she is aged 34, not exceed 2 children when she is aged 36, and not exceed 1 child when she is aged 38.

The Average Number of Children in Family.—Tables XXXII and XXXV (3) contain statements of the average number of children found to have resulted from the marriages recorded in the census schedules, the former dealing with all marriages in which the wife at the time of marriage was of child-bearing age, and the latter with those marriages only in which the wife, being of child-bearing age at the time of marriage, had attained the age of 45—the arbitrary limit of child-bearing here adopted—before the taking of the census. In Table XXXII the averages are stated for every combination of age of wife and husband at marriage, and are given separately for each year of duration of marriage. The averages given in Table XXXV (3) represent the number of children, or complete family, resulting from marriages of spouses of specified ages.

The marriages included in the three parts of Table XXXV—i.e., marriages in which the wife had reached the end of her fertile period—number 239,943, and as the children born to them number 1,316,995, the average number of children to each marriage is 5·49. This average represents, as has been said above, the mean or average size of the total or complete family resulting from all marriages in which the wife was of child-bearing age at the time of marriage, and had reached the age of 45 during the continuance of the marriage.

The same table shows how this average is affected by the age of the wife at marriage. The total or complete family resulting from marriages in which the wife at the time of marriage was aged 17 is found to be 9·02, and this average is found to be a diminishing quantity as the age of the wife at marriage increases. It falls below 9 when the age of the wife at marriage was 19; below 8 when the age was 20; below 7 when the age was 22; below 6 when the age was 25; below 5 when the age was 27; below 4 when the age was 30; below 3 when the age was 33; below 2 when the age was 36; and below 1 when the age was 40.

The average number of children in these completed families resulting from the marriage of men of specified ages is found to vary in a similar manner, a result no doubt largely attributable to the well-known fact that the ages of husbands and wives are highly correlated. The maximum average complete family for any age of husband at marriage is found to be 8·25, and to occur when the age of the husband at marriage was 18. This average falls below 8 when the age rises to 20; below 7 when the age rises to 23; below 6 when the age rises to 26; below 5 when the age rises to 30; below 4 when the age rises to 34; below 3 when the age rises to 38; below 2 when the age rises to 46; and below 1 when the age rises to 54.

Marriage Fertility since 1861.

Note.—The numbers indicated on this Chart are based on Marriages that took place in the years mentioned and continued until 1911, and are restricted to those in which the fertile period had been completed.

The effect of postponement of marriage for one year may be estimated by comparing the average complete family of any age of the wife or husband at the time of marriage with that of one year younger. The figures dealing with this calculation are collected in Table O. It may there be seen that the effect of each year's delay of marriage in the case of both men and women is a diminishing quantity as the age advances. In the case of women aged 20 to 24 the effect of one year's delay averages 0.45 of a child in the complete family, or, in other words, 45 fewer children are born to each 100 marriages; and, in the case of men, 0.32 of a child per marriage, or 32 children to each 100 marriages. When the number of the average total family is calculated in connection with the age of the woman at marriage, this figure falls to 0.37 for ages 25 to 29; to 0.32 for ages 30 to 34; to 0.29 for ages 35 to 39; and to 0.19 for ages 40 to 44. When the average total families are calculated in relation to the age of the men at marriage this figure falls to 0.28 for ages 25 to 29; to 0.23 for ages 30 to 34; to 0.22 for ages 35 to 39; to 0.15 for ages 40 to 44; to 0.12 for ages 45 to 49; to 0.09 for ages 50 to 54; and to 0.04 for ages 55 to 59.

The observed differences, as shown in Table O, are too rough to be satisfactory indications of the true effects of the postponement of marriage at each age of the marrying woman, and for this purpose a series of graduated figures have been prepared. These graduated figures, which are also shown in Table O, have been prepared by fitting a parabolic regression curve to the observed means. As was found when comparing the quinquennial average effect of a year's delay of marriage, these graduated figures show the effect of postponement to be a diminishing quantity as the wife's age advances. If a woman's marriage be delayed from age 19 to age 20 the result is a reduction of 0.45 in the most probable number of children, and this figure falls below 0.40 when the delay is from age 24 to age 25; below 0.35 when the delay is from age 30 to age 31; and below 0.30 when the delay is from age 35 to age 36.

When the average number of children in the family is calculated in connection with the years of duration of marriage, and independently of the age of the wives and husbands at the time of marriage, it is found, as might be expected, that the number increases as the duration increases. Thus, an average of one child is found in the third year of the duration of marriage; an average of two children in the sixth year of marriage; one of three in the tenth year of marriage; one of four in the fourteenth year of marriage; one of five in the twentieth year of marriage; and one of six in the twenty-eighth year of marriage. These periods vary with the ages of the wives at marriage. When the wives are aged less than 25 an average family of one child is found in the third year of marriage, but when aged from 26 to 34 this is not found until the fourth year, and when aged 35 or 36 until the fifth year, and when aged 37 or 38 until the seventh year. An average family of two children is found in the fifth year when the women at marriage were 16 to 21; in the sixth year when they were aged 22 to 24; in the seventh year when they were aged 25 to 29; in the eighth year when they were aged 30 to 32; and not until the thirteenth year when they were aged 35. An average family of four children is found in the tenth year when the wives were aged 16 at the time of marriage; in the eleventh year when they were aged 20; in the twelfth year when they were aged 21; in the thirteenth year when they were aged 23; and in the fourteenth year when they were aged 24.

Decline of Fertility of Marriage during Recent Years.—To study this subject, all marriages in which the fertile period of the woman's life was completed during the continuance of marriage, and consequently in which the families are complete, have been tabulated in relation to the year of marriage and the age of the wife at marriage, and this tabulation will be found in Tables XLVI (1), (2), and (3). Some of the figures of this tabulation have been produced in graphic form, and will be seen in the accompanying chart.

A scrutiny of these tables and a glance at the chart afford ample evidence of a continuous drop in the fertility of marriage. In Table XLVI (3) it may be seen that marriages of women aged twenty, and taking place in 1864 or previous years, resulted in complete families averaging 8.48 children, and that this average has steadily declined. It is 8.42 for marriages of the years 1865 to 1869; 8.04 for those of the years 1870 to 1874; 7.88 for those of the years 1875 to 1879; 7.59 for the years 1880 to 1884; and 7.39 for the years 1885 and 1886—no corresponding figures being available for marriages of subsequent years because the completion of the fertile period had not been reached at the date of the census. Similar quinquennial averages for each alternate year of the wife's age from 21 to 39 are collected in Table P, those of the other alternate years from age 20 to 30 being given in the chart. These figures show the uniformity of the drop. The total

fertility of marriage for age of wife 21 has fallen from 818 children per hundred marriages to 700; for age of wife 23, from 740 to 597; for age 25, from 673 to 503; for age 27, from 580 to 437; for age 29, from 574 to 353; for age 31, from 483 to 304; and generally similar though less steady declines are found in the older ages. The oscillations in the decline of the average at the older ages may be attributable to the smallness of the numbers dealt with, marriages at these ages being much less numerous than at the younger ages. For ages 20 to 24 of wife at marriage, the decline averages 128 children per hundred marriages; for ages 25 to 29, 168 children; for ages 30 to 34, 156 children; and for ages 35 to 39, 164 children.

Although this test demonstrates that the actual fertility of marriage is now less than formerly—that a woman marrying at any specified age will probably be the mother of fewer children than was the case formerly—it must not be assumed that this is the only, or even the most important, factor accountable for the well-known drop of the national birth-rate during recent years. Other factors may be at work, but no attempt is here made to discriminate or to estimate how much of the decline of the birth-rate is due to decreased fertility, and how much to other factors. It is almost needless to state that any dissertation regarding the causation of the decreased fertility of marriage, a subject on which census information throws no real light, would be quite out of place in this Report.

Occupational Fertilities.—This term has been coined, and is used, to indicate the comparative fertility of marriage in relationship to the occupations of the husbands.

Occupational fertilities, as ascertained by the returns of the present census, are dealt with in Tables XLVII and XLVIII. The figures in these tables show not only the number of families included in each occupational group, the mean number of children in each group, and the number of families of specified sizes in each, but also the standard variations of the means, and the probable errors of the differences between the occupational means and the general mean of all families included in this study. In the construction of Table XLVIII the occupational fertilities are not taken as significantly greater or less than the general mean unless the differences between them are at least three times as large as the probable errors of those differences.

The simplest method of studying the fertility in occupational groups would be to estimate the average number of children in all families of which the husbands were returned as having a particular occupation, but such a method would not be satisfactory, because the resulting figures might not be fairly comparable, and might be too much influenced by factors other than those peculiar to the occupation. For instance, were an average family of five children found by this method in one occupational group, and one of four in another group, the difference could not reasonably be ascribed to occupational influence; it might be due to the wives in the one occupational group being younger at the time of marriage than in the other, or it might be due to the marriages of the one group being of longer duration than those of the other. To obviate such fallacy—the fallacy of comparing dissimilar quantities—only a selection of all marriages has been included in this study, an endeavour being made to get groups which, within reasonable limits, are fairly comparable.

In selecting from the census records those marriages which can legitimately be used for this purpose, attention was paid to the two principal causes of variation of the number of children in a family, namely, the duration of marriage and the age of the wife at marriage. It was found impracticable to carry out this scheme of selection to its logical limit, *i.e.*, the use of those marriages only in which all the wives were of one age at the time of marriage, and which were all of the same duration, or all of which had continued beyond the fertile period—for such excessive or refined selection would have resulted in reducing the number of marriages in the occupational groups so far that they would have been too small to establish reliable averages for the majority of the occupations; and a freer, if not so perfect a selection, has been made. Accordingly the limits of selection for inclusion in this study were (1) that the wife should be over 22 but under 27 years of age at the time of marriage, and (2) that the marriage should have continued for at least 15 years. No doubt five different ages of wife at marriage may be a rather wide limit for the purpose, but this was necessary in order to secure even moderate figures for many of the occupational groups. The same may be said of the inclusion of some marriages in which the wives had not attained the completion of their fertile periods at the date of the census. The selection is not perfect, but may be accepted as the best in the circumstances, and as sufficient for our purpose. While it limits the probable error arising from paucity of observations, it also diminishes the chance of fallacy arising from comparison of dissimilar quantities, and may therefore be accepted as capable of giving results which are reasonably reliable.

Table XLVII contains a statement of the number of these selected marriages in each occupational group, of the number of these having specified numbers of children, and of the mean or average number of children per marriage, the occupational groups being arranged in order of magnitude of the mean number of children. Table XLVIII supplies a more accurate comparison between the mean number of children in the occupational groups, and the mean found in all the marriages included in this study, the method of making the comparison being indicated by the formula given at the head of the table. In it the occupational groups are arranged in three classes; (1) those in which the mean or average number of children per marriage is significantly greater than that of the marriages of all occupations taken collectively; (2) those in which that mean is not significantly either greater or less than that general mean; and (3) those in which it is significantly less, the test of significance being whether the observed difference between the mean of a group and the general mean is at least three times as large as the probable error of that difference. In the text which follows no reference will be made to the actual differences of the means, but merely to this classification, occupations included in Class 1 being accepted as of high fertility, and those in Class 3 as of low fertility. Should further and finer classification be desired, the figures given in these tables will enable it to be made.

Professional and Allied Occupations.—These without exception are found to be occupations of low fertility. Among them may be mentioned the clerical, legal, medical, and teaching professions, officers of the army and navy, artists, men with literary and scientific pursuits, land surveyors, civil engineers, dentists, veterinary surgeons, and pharmaceutical and dispensing chemists. Of the twelve occupations named at the end of Table XLVIII, where the arrangement is in order of the crude means, eleven are occupations more or less professional in character, while the twelfth, consisting of civil service, law, and other clerks, is closely akin thereto.

Labouring Occupations.—These are in marked contrast to the foregoing, for the majority are found to be of high fertility. Coal heavers, navvies, builders' labourers, dock labourers, and general labourers are all found to be in Class I. This indicates that the average size of family is with them significantly greater than the general average.

Agricultural and Fishing Occupations.—These may generally be described as of high fertility, for the majority of them are found to be in Class I, and to have an average size of family significantly greater than the general mean. Of all occupations, that of crofter is found to have the highest fertility, heading the list given in Table XLVII. Fishermen-crofters, agricultural labourers, fishermen, shepherds, farmers and graziers, farm grieves and foremen, "others with agricultural occupations," are all in Class I, while cattle-dealers, foresters, nurserymen, and dairymen are found to be in Class II. None of those occupations are in Class III, and thus none are found to have fertilities significantly less than the general average.

Workers in Mines and Quarries.—These are found to be of high fertility. The families of coal and shale miners, and stone and slate miners, dressers, and quarriers are

found to average a number which is significantly greater than the general mean, and the same is found in the case of owners, agents, and managers of coal and shale mines. Owners, agents and managers of stone and slate quarries are found to have an average fertility not significantly different from the general mean.

Transport Workers.—Tables XLVII and XLVIII include three groups of men with these occupations—carters and others concerned with transport by road, seamen and others concerned with transport by water, and men with occupations on railways. The first of these groups, carters and others with allied occupations, is found to be of high fertility; the third, railway servants, is found to be of low fertility; while the second, men of the merchant service, is found to be of a fertility not significantly different from the general mean.

Commercial and Clerking Occupations.—These are found to be of low fertility, insurance agents, commercial occupations, and clerks (civil service, law, commercial, and banks and insurance), all being found in Class III. No similar occupations are found in either Class I or Class II.

Trades.—A scrutiny of Table XLVIII shows that tradesmen are found in all three classes, some being of high fertility, some of low, and some of fertility not significantly different from the general mean. Among those of high fertility are glaziers, plasterers, masons and builders, ironfounders, blacksmiths, and engine-drivers and stokers (not railway or marine). Among those of low fertility are tailors, carpenters, painters, engineers, patternmakers, plumbers, coppersmiths, hairdressers, electricians, instrument makers, and printers. Among those with a fertility not significantly different from the mean are chimney sweeps, tanners and curriers, boilermakers, shipwrights, type cutters, coachbuilders, brassfinishers, cycle and motor car makers, brassfounders, saddlers, cutlers, millwrights, and bleachers and dyers.

Makers and Dealers.—This group of occupations includes the shopkeeping classes, and along with them some occupations, such as bootmakers and bakers, which may or may not belong to the shopkeeping class, but which, from the description given, cannot be separated from them. This group is generally found to be one of low fertility, the majority of the occupations in it being found in Class III, with fertilities significantly less than the general mean. Among those in Class III are butchers and fish dealers, furniture dealers, hardware dealers, grocers, watchmakers, booksellers, drapers, tobacconists, and greengrocers. Occupations of this group with fertilities not significantly different from the general mean include bootmakers, bread and biscuit makers, and general shopkeepers. No occupation in this group is found to have a high fertility.

Manufacturing Occupations.—These include a mixed and ill-defined group of occupations ranging from skilled tradesmen to labourers, and these are found to be in all three classes. Among those in Class I (high fertility), are workers in iron shipbuilding, workers in iron and steel manufacture, and manufacturing chemists; and among those in Class III (low fertility), are workers in flax and linen manufacture, engine and machine makers, workers in stationery manufacture, in wool and worsted manufacture, and in indiarubber manufacture. The list of those with fertility not significantly different from the general mean is fairly long, and includes workers in brick and pottery manufacture, in floorcloth manufacture, in silk manufacture, in sugar manufacture, in paper manufacture, in hemp and jute manufacture, and in cotton manufacture.

Domestic and Allied Services.—Occupations of this nature are found to be of low fertility, and are all included in Class III, having average fertilities significantly less than the general mean. These occupations include both indoor and outdoor domestic servants, waiters, barmen, innkeepers, and publicans, and keepers of boarding, lodging, and eating houses.

Public Services.—Occupations connected with these services, with the exception of scavengers, are found to be in Class II or Class III. Scavengers alone, of the occupations in the group, are found to have an average fertility significantly greater than the general mean. Those in Class III, having fertilities significantly less than the general mean, include police, postmen, municipal and parish officers, soldiers, and men of the Royal Navy.

Occupations connected with the service of gasworks and waterworks, of baths and wash-houses, of harbours and docks, of drainage and sanitation, and of churches and cemeteries, are found to have fertilities not significantly different from the general mean.

Child Mortality and Occupation of Mothers.—A scrutiny of the fertility figures of the census, and a separation of the children of the married women into surviving and deceased children throws some light on the relative child mortalities in families in which the mothers are not occupied, as distinguished from those in which the mothers are occupied.

All returns were not included in this study, because the fact that there has been a considerable loss by death among the children of a marriage does not imply that they have died young, or at a period when the guardianship of the mother was in any way responsible for their health. Many of the marriages reported in the census are of long duration, and as the families are frequently grown up, and may even have reached old age, the deaths occurring in them are not of necessity indicative of child mortality. Consequently, for the study of child mortality, an arbitrary limit of fifteen years' duration has been taken, marriages in which the duration is less than that being included, and those in which the duration is of that amount or more being excluded.

In all 5,458 marriages were collected from the census returns in which the husbands and the wives were living together, and in which the wives were described as having remunerative occupation, and which had durations of less than fifteen years; and for purposes of comparison a sample of 5,458 marriages with unoccupied mothers was carefully selected. The mode of selection of the latter was as follows:—The tabulation cards of all marriages had been arranged for other purposes by duration of marriage, and by ages of husband and of wife; these were examined for the cards of those mothers who were returned as "occupied," and as each one of these was found and separated the card next to it in the bundle was picked out and laid aside. The cards so collected formed the sample. Having obtained these strictly comparable samples, the numbers of living and deceased children recorded in each were tabulated and compared. The resulting figures are given in Table Q.

TABLE Q.—MORTALITY IN FAMILIES OF WORKING MOTHERS.

Note.—Only marriages of less than fifteen years' duration are included in this Table. See explanatory reference in text.

* See pp. 101 and 102.

The total number of children found to have been born to the 5,458 marriages in which the mothers were at census time without remunerative occupation was 13,970, and the number of children born to the 5,458 marriages in which the mothers had at that time remunerative occupation was 12,881, the average number of the family among the former being 2·56, and among the latter, 2·36.

Of the 13,970 children born to the marriages in which the mothers were unoccupied, 11,908, or 85·2 per cent., were ascertained to be living at the time of the census, and 2,062, or 14·8 per cent., to be then deceased. Of the 12,881 children born to the marriages in which the wives were returned as having remunerative occupation, 9,790, or 76·0 per cent., were alive at census date, and 3,091, or 24·0 per cent., were then deceased. This comparison shows a distinct difference, and seems to support the inference that the fact of the mother having remunerative occupation decreases the chance of survival of the children, and increases the chance of the death of the children at the younger age period. The chance of survival through the younger age period when the mother is unoccupied is 0·85, or fully $5\frac{1}{2}$ to 1, but when the mother is occupied this chance falls to 0·76, or 3 to 1.

The tabulation further shows that the chance of the early death of children in all marriages with occupied mothers is 0·24, but this ratio is not the same for all occupations. It is found to vary from 0·30 when the occupation of the mother is in cotton manufacture, 0·29 when it is in hemp and jute manufacture, 0·29 when it is charring, 0·28 when it is domestic service, and 0·28 when it is hawking, to 0·15 when it is dressmaking, 0·16 when it is farm service, and 0·17 when it is in either wool and worsted, or flax and linen manufacture. When the wife's occupation is that of a tailor the chance is 0·26, when that of a laundry worker, 0·26, and when that of a seamstress, 0·18. Some of these ratios are based on figures too small to give altogether satisfactory results, but the general result—the fact of a higher mortality among children of working mothers than among those of non-working mothers—may be accepted as well established.

A Fertility Table.—Among those advocating the inclusion in the census of a study of the fertility of marriage there were some who claimed that by the use of the ascertained figures tables might be constructed to show the probable fertility of marriage, in the manner that a life table shows the probable duration of life; and to meet these expressed views an endeavour has been made to construct such a table. The difficulties, however, have been unexpectedly great.

Tables XXXII and XXXV (3) may, in a way, be accepted as fertility tables, for these tables show the average number of children found by observation to result from the marriages of men and women of specified ages after the marriages have continued for stated periods, or continued until the wives have attained the age of 45. In short, these tables contain the essential information wanted in a fertility table. But these tables are not satisfactory for use as a general fertility table, because the figures in them, being based on crude observations, are inevitably rough and subject to oscillations, the roughness and oscillation being due to the nature of random sampling and to paucity of data for certain combinations of the independent variables.

For the purposes of this study, partly to ease the work and partly to get two independent series of observations, the recorded fertilities were divided into two groups, the one including all marriages in which the wife had attained age 45 before the census, and therefore in which the fertilities were complete, and the other including all marriages in which the wife had not attained that age and in which the fertilities were quantities subject to increase. Marriages in the first group, those of completed fertility, numbered 239,943; and those in the second group, those of continuing fertility, 440,741. The fertilities in the second group are influenced by all three independent variables, the age of the wife at marriage, the age of the husband at marriage, and the duration of the marriage; but those in the first group are influenced by only two of the variables, the influence of duration being eliminated.

The only published method of determining the most probable value of one character from two or more other characters, known to be correlated to each other and to the first character, is that of multiple linear regression. But the essential condition attached to the application of this method is that the regressions dealt with must be linear. An examination of the data, however, showed that this condition was not fulfilled.

When it became apparent that the regressions were not linear, Dr Tocher, Lecturer on Statistics, University of Aberdeen, stated that while non-linear multiple regression formulæ had not yet been published, suitable formulæ could probably be found to fit the data. On his recommendation the data were submitted to Mr George Rae, B.Sc., Aberdeen University. This course having been sanctioned by the Treasury, the work of construction of tables was proceeded with, and the results of Mr Rae's work are embodied in a Memorandum prepared by him and published as an Appendix to this Report. (See Appendix II, and also Tables XXXVIII and XLV).

Mr Rae, in his Memorandum, fully explains the method of construction of his Tables, and has indicated where there might be divergences and a possible explanation of them.

It might be of interest to give here the multiple linear regression formulæ and the formulæ used by Mr Rae in the construction of his Tables. In them C = the average number of children per marriage, W = the age of the wife at the time of marriage, H = the age of the husband at the time of marriage, and D = the years of duration of marriage. The first equation in each case applies to the linear regression, and the lower to the non-linear regression.

Marriages of Completed Fertility.

$$C = 14.889 - 0.332 W - 0.028 H$$

$$C = 20.149493 - 0.555812 W - 0.173804 H - 0.002846 W^2 - 0.003494 H^2 + 0.012675 WH$$

Marriages of Continuing Fertility.

$$C = 3.299 - 0.076 W - 0.024 H + 0.267 D$$

$$C = 6.571791 - 0.297399 W - 0.087090 H + 0.314894 D + 0.004307 W^2 + 0.000955 H^2 - 0.002118 D^2$$

The complete list of the ordinary and partial correlation coefficients and the ordinary and multiple linear equations is printed in Appendix I, and, though strictly accurate only when the regressions are linear, the values may still be useful for the purpose of drawing general conclusions.

If we consider, for instance, the following equation,

$$(1) C = 14.89 - 0.33 W - 0.028 H,$$

we can see roughly the effects of the age of husband and of wife at marriage. As is to be expected, the age of the wife at marriage exercises a preponderating effect on the size of the family. A difference of three years in the age of wife at marriage, for a constant age of husband at marriage, means on the average about one child less at the end of the fertile period, while it would take a difference of about forty years in the age of husband at marriage, for a constant age of wife, to bring about the same result. On account of the small effect of the age of husband at marriage on the mean size of family at the end of the fertile period, this mean size of family could, in most cases, be got approximately either from equation (1) or from the ordinary linear regression equation between C and W , namely (2) $C = 14.72 - 0.36 W$. For example, if $W = 25$ and $H = 30$, equation (1) gives $C = 14.89 - 0.33 \times 25 - 0.028 \times 30 = 5.80$; while equation (2) gives $C = 14.72 - 0.36 \times 25 = 5.72$, using $W = 25$ alone. The result from Mr Rae's Table is 5.62.

Again, from equation (1) we have seen that it would take a difference of about three years in the age of wife at marriage to bring about, on an average, a reduction of one child at the end of the fertility period, while the age of husband at marriage has a much smaller effect than that of the wife on the size of the family. This latter statement apparently contradicts the result given in the linear regression equation—(3) $C = 11.86 - 0.23 H$. Owing, however, to the high correlation (.709) between W and H , the result is not contradictory, and is really due to the influence of the age of the wife at marriage, because the correlation, .709, shows that there is a strong bias in men and women towards securing mates of the same age as themselves.

On examining the linear multiple regression equations for the group of marriages, where the fertilities are continuing, we see the predominating effect of the duration of marriage.

Further, from the following equation,

$$(4) C = 3.299 - 0.076 W - 0.024 H + 0.267 D,$$

it is clear that the influence of the wife at marriage is greater than that of the husband. It is also evident that, for constant ages of parents at marriage, there is added on to the size of the family on an average one child every three or four years. As the combined influence of the ages at marriage of the parents is considerably less than the duration of marriage, we get a similar result by taking the linear regression equation between the mean size of family and the duration of marriage. Finally, from equation (4) we note that, for a constant duration of marriage and a constant age of husband at marriage, it takes a difference of about 13 years in the age of the wife at marriage, in order to reduce the average size of the family by one child; and a difference of about forty years in the age of husband at marriage for a constant age of wife at marriage and a constant duration of marriage to effect the same reduction. Each of these numbers is, from the nature of the assumption made, only roughly approximate. They are probably both rather large. It must be remembered that the results here discussed are results based on the assumption of linearity of regression—an assumption which is shown not to hold for the characters under discussion.

APPENDIX I.

Correlation Values.

(On the assumption of Linear Regression.)

(I) Marriages of Completed Fertility, *i.e.*, in which the wives had attained the age of 45.

Number of children = $C=1$
 Age of wife at marriage = $W=2$
 Age of husband at marriage = $H=3$
 r = correlation coefficient.
 η = correlation ratio.
 b = coefficient of regression.

Total Marriages = 239,943

,, Children = 1,316,995

Mean number of children per marriage = $5.48878 \pm .00501$
 ,, age of wife at marriage = $26.00806 \pm .00817$
 ,, age of husband at marriage = $28.14794 \pm .00967$

Standard deviation of number of children = $3.6359 \pm .00354$
 ,, ,, of ages of wives = $5.9325 \pm .00578$
 ,, ,, husbands = $7.0213 \pm .00684$

Zero Order.

$r_{12} = -0.57938 \pm .00091$; $r_{13} = -0.43728 \pm .00125$; $r_{23} = +0.70882 \pm .00069$
 $\eta_{12} = 0.58414 \pm .00091$; $\eta_{13} = 0.46195 \pm .00108$; $\eta_{23} = 0.71597 \pm .00067$
 $\eta_{21} = 0.59229 \pm .00089$; $\eta_{31} = 0.45237 \pm .00110$; $\eta_{32} = 0.71514 \pm .00070$
 $b_{12} = -0.35509 \pm .00102$; $b_{13} = -0.22644 \pm .00064$; $b_{23} = +0.59890 \pm .00081$
 $b_{21} = -0.94534 \pm .00183$; $b_{31} = -0.84443 \pm .00239$; $b_{32} = +0.83891 \pm .00114$

First Order.

APPENDIX II.

ON THE MEAN SIZE OF FAMILY PREDICTED FROM THE AGES OF PARENTS AT MARRIAGE, AND FROM THE DURATION OF MARRIAGE ON THE BASIS OF MULTIPLE REGRESSION FORMULÆ OF THE SECOND DEGREE.

By GEORGE RAE, B.Sc.,

Assistant to the Professor of Mathematics in the University of Aberdeen.

(1) **Introductory.**—This work on the mean size of family was undertaken at the request of the Registrar-General, after consultation with Dr J. F. Tocher, Lecturer on Statistics at the University of Aberdeen. Dr Tocher pointed out to me that the relationships between the ages of wives and husbands at marriage and the size of family were such as indicated non-linear regression curves, and that therefore multiple correlation constants would have to be found from formulæ deduced on the basis of non-linear regression. This, indeed, appeared evident as soon as I had made the preliminary examination of the data. The formulæ used in the construction of the Tables were first developed by extending the method of maximum correlation given by Professor Pearson ("Biometrika," vol. viii., p. 438), which leads to the same result as that got by fitting a surface of the same form, to the means by the method of least squares.

The proof given in the following pages, though perhaps not quite so general as the one indicated above, makes similar assumptions, and leads to the same result.

All the calculations, which indeed form the bulk of the investigation, were performed in Dr Tocher's laboratory, where I had the assistance of a part of his staff. Without this assistance the work could not have been completed in time for publication. I take this opportunity of thanking Dr Tocher most heartily for his readiness in placing his staff and calculating machines at my disposal, and also for the suggestions he has made during the course of the investigation.

(2) **The Problem in the Case of Completed Fertilities.**—The problem before me was to construct a Table shewing the average number of children which may be expected when the wife's fertile period had been completed, when a husband of a specified age marries a wife of a specified age.

The wife's fertile period was taken to have been completed when she had attained the age of 45.

Thus the Table was to furnish an answer to such a question as—A man of 28 marries a woman of 26, what is the most probable size of family when the wife has attained the age of 45? The data, which were abstracted from the recent Census Returns by Dr Dunlop, were included in three Tables.

- (1) A Table shewing the number of families for a given age of wife at marriage, and a given size of family.
- (2) A Table shewing the number of families for a given age of husband at marriage, and a given size of family.
- (3) A Table shewing the number of families for a given age of wife at marriage, and given age of husband at marriage.

These Tables are published in the present volume of the Report,* but in the Tables for (2) and (3) the ages of husbands above 60 are not given, and the distributions for all the ages above 60 are loaded at 60.

Dr Dunlop, however, kindly furnished me with the distributions of age of wife at marriage, and size of family for all ages of husband between 60 and 75, and it was from the extended Tables that my constants were calculated.

(3) **Preliminary Examination of Data on Completed Fertilities.**—The means and standard deviations for each distribution (number of children, age of wife at marriage, age of husband at marriage) were calculated, and also the correlation coefficients r and correlation ratios η for each pair. These calculations were made by Dr Dunlop. $\eta-r$ was then compared with its probable error

$$\left[\frac{\eta-r}{E_{\eta-r}} = \frac{\sqrt{N}}{.67449} \frac{1}{2} \sqrt{\eta^2 - r^2} \right]^\dagger$$

* Tables xxxv to xxxvii

† "Biometrika," vol. iv., pp. 348-349, Blakeman on "Linearity of Regression."

and the following results were got :—

	η	r	$\frac{\eta-r}{E_{\eta-r}}$
C and W (number of children and age of wife at marriage) .	·58325	– ·57936	24·4
C and H (number of children and age of husband at marriage) .	·46195	– ·43728	54·1
W and H (age of wife at marriage and age of husband at marriage)	·71597	·70882	36·8

The values of η for C and H and W and H are not correct to five places, as the means of the arrays from which they were calculated were taken only to two places of decimals. Further, both η and r for these two rows were calculated from the Tables given in this Report, and not on the extended Tables which were supplied afterwards. Hence the values given in the third column must be taken as approximate. With a more accurate determination of η , however, they are not likely to be very far wrong. The values of η and r , in the second and third rows, were not used for any other purpose. The values of η being then about thirty times their probable errors, it is obvious that the regressions are not linear. This is also evident if the means of each array of any one variable are plotted in a curve for the corresponding values of the types of a second.

The case of the mean numbers of children for the various ages of wife at marriage was examined in greater detail; the value of η for this case was found by taking the means to six places of decimals.

The criteria for linear, parabolic, and cubical regression respectively, calculated by the method given by Professor Pearson in his Memoir* on non-linear regression were as follows :—

For linear regression	·004526
For parabolic regression	·001802
For cubical regression	·001653

For linear regression the first one should vanish; for parabolic, the second; and for cubical regression, the third. Hence it is evident that a parabola would give a considerably better fit than a straight line, and only a slightly worse fit than a cubic. The regression parabola then was fitted to the means of the arrays of children for given ages of wife at marriage, and the means calculated for this parabola when compared with the observed means gave a very close agreement. (See page xxxiii of this Report.)

(4) Method of finding Formulæ used in the Construction of Table of Completed Fertilities.—These regressions, then, being all closely parabolic, it was obvious that the ordinary linear multiple regression formula giving the mean numbers of children for given ages of wife at marriage and given ages of husband at marriage would not give very accurate results. To get over this difficulty the following method was adopted.

- Let C = the number of children at the end of the fertile period.
- $\bar{C}$ = the mean number of children at the end of the fertile period.
- W = the age of wife at marriage.
- $\bar{W}$ = the mean age of wife at marriage.
- H = the age of husband at marriage.
- $\bar{H}$ = the mean age of husband at marriage.
- N = the total number of families.

$C - \bar{C} = c, \quad W - \bar{W} = w, \quad H - \bar{H} = h.$

${}_w\mu_1, {}_w\mu_2, {}_w\mu_3, {}_w\mu_4$ = the first, second, third, and fourth moments about the mean of the distribution of the age of wife at marriage.

${}_h\mu_1, {}_h\mu_2, {}_h\mu_3, {}_h\mu_4$ = the first, second, third, and fourth moments about the mean of the distribution of the age of husband at marriage.

* "On the Theory of Skew Correlation and Non-linear Regression—Drapers' Company Research Memoirs." Biometric Series II.

$$\begin{array}{ll} N_{cw} p_{11} = S(cw) & N_{cw} p_{12} = S(cw^2) \\ N_{ch} p_{11} = S(ch) & N_{ch} p_{12} = S(ch^2) \\ N_{wh} p_{st} = S(wh^t) & \end{array}$$

The product moments were first calculated about an assumed origin and ${}_{cw}p'_{11}, {}_{cw}p'_{12}, \dots, {}_{wv}p'_{st}$ being their values about that origin, the corresponding product moments about the mean were got from them, by using the following formulæ: $\bar{c}, \bar{w}, \bar{h}$ being the distances of the assumed origins from their respective means.

$$\begin{aligned} c_w p_{11} &= c_w \dot{p}'_{11} - \bar{c} \bar{w} \\ c_w p_{12} &= c_w \dot{p}'_{12} - 2 \bar{w} c_w \dot{p}'_{11} + \bar{c} \bar{w}^2 - \bar{c}_w \mu_2 \\ c_w p_{13} &= c_w \dot{p}'_{13} - 3 \bar{w} c_w \dot{p}'_{12} + 3 \bar{w}^2 c_w \dot{p}'_{11} - \bar{c} \bar{w}^3 - \bar{c}_w \mu_3 \end{aligned}$$

The corresponding formulæ for ${}_{ch}p_{11}$, ${}_{ch}p_{12}$ are got by writing h for w in the first two of the above formulæ.

Also,

$$\begin{aligned}
{}_{wh}p_{11} &= {}_{wh}p'_{11} - \bar{w}\bar{h} \\
{}_{wh}p_{12} &= {}_{wh}p'_{12} - 2\bar{h}{}_{wh}p'_{11} + \bar{w}\bar{h}^2 - \bar{w}_h\mu_2 \\
{}_{wh}p_{21} &= {}_{wh}p'_{21} - 2\bar{w}{}_{wh}p'_{11} + \bar{w}^2\bar{h} - \bar{h}_w\mu_2 \\
{}_{wh}p_{22} &= {}_{wh}p'_{22} - 2\bar{w}{}_{wh}p'_{12} - 2\bar{h}{}_{wh}p'_{21} + 4\bar{w}\bar{h}{}_{wh}p'_{11} + \bar{w}^2{}_h\mu_2 + \bar{h}^2{}_w\mu_2 - \bar{w}^2\bar{h}^2 \\
{}_{wh}p_{31} &= {}_{wh}p'_{31} - 3\bar{w}{}_{wh}p'_{21} + 3\bar{w}^2{}_{wh}p'_{11} - \bar{w}^3\bar{h} - \bar{h}_w\mu_3 \\
{}_{wh}p_{13} &= {}_{wh}p'_{13} - 3\bar{h}{}_{wh}p'_{12} + 3\bar{h}^2{}_{wh}p'_{11} - \bar{w}\bar{h}^3 - \bar{w}_h\mu_3 \\
{}_{wh}p_{41} &= {}_{wh}p'_{41} - 4\bar{w}{}_{wh}p'_{31} + 6\bar{w}^2{}_{wh}p'_{21} - 4\bar{w}^3{}_{wh}p'_{11} + \bar{w}^4\bar{h} - \bar{h}_w\mu_4 \\
{}_{wh}p_{32} &= {}_{wh}p'_{32} - 3\bar{w}{}_{wh}p'_{22} + 3\bar{w}^2{}_{wh}p'_{12} - 2\bar{h}{}_{wh}p'_{31} + 6\bar{w}\bar{h}{}_{wh}p'_{21} - 6\bar{w}^2\bar{h}{}_{wh}p'_{11} - \bar{w}^3{}_h\mu_2 \\
&\quad + \bar{h}^2{}_w\mu_3 + \bar{w}^3\bar{h}^2
\end{aligned}$$

The proof for the formula for ${}_{wh}p_{32}$ is as follows:

$${}_{wh}p_{3:2} = \frac{1}{N} \sum (w' - \bar{w})^3 (h' - \bar{h})^2$$

where w' and h' are the deviations of W and H respectively from their assumed origins. Multiplying out we get

$$\begin{aligned}
{}_{w\hbar}P_{23} &= \frac{1}{N^-} \left\{ S \left(w'^3 - 3w'^2\bar{w} + 3w'\bar{w}^2 - \bar{w}^3 \right) (h'^2 - 2h'h) + \bar{h}^2 (w' - \bar{w})^3 \right\} \\
&= \frac{1}{N^-} \left\{ S \left(w'^3 h'^2 - 3\bar{w} w'^2 h'^2 + 3\bar{w}^2 w' h'^2 - \bar{w}^3 h'^2 - 2\bar{h} w'^3 h' + 6\bar{w}\bar{h} w'^2 h' - 6\bar{w}^2\bar{h} w' h' \right. \right. \\
&\quad \left. \left. + 2\bar{w}^3\bar{h}h' + \bar{h}^2 (w' - \bar{w})^3 \right\} \\
&= {}_{w\hbar}P'_{32} - 3\bar{w} {}_{w\hbar}P'_{22} + 3\bar{w}^2 {}_{w\hbar}P'_{12} - \bar{w}^3 ({}_{h\mu_2} + \bar{h}^2) - 2\bar{h} {}_{w\hbar}P'_{31} + 6\bar{w}\bar{h} {}_{w\hbar}P'_{21} - 6\bar{w}^2\bar{h} {}_{w\hbar}P'_{11} \\
&\quad + 2\bar{w}^3\bar{h}^2 + \bar{h}^2 {}_{w\mu_3} \\
&= {}_{w\hbar}P'_{32} - 3\bar{w} {}_{w\hbar}P'_{22} + 3\bar{w}^2 {}_{w\hbar}P'_{12} - \bar{w}^3 {}_{h\mu_2} - 2\bar{h} {}_{w\hbar}P'_{31} + 6\bar{w}\bar{h} {}_{w\hbar}P'_{21} - 6\bar{w}^2\bar{h} {}_{w\hbar}P'_{11} + \bar{h}^2 {}_{w\mu_3} + \bar{w}^3\bar{h}^2
\end{aligned}$$

The proofs of the other formulæ are got in exactly the same way.

Sheppard's corrections were not applicable to the data, and were therefore not employed.

Now, let C_{WH} be the mean number of children at the end of the fertile period for an age at marriage of wife, W ; and an age at marriage of husband, H ; and let

$$C_{wh} = C_{WH} - \bar{C}$$

then we assume c_{wh} to be given by the equation

$$c_{wh} = a_0 + a_1 w + a_2 h + b_1 w^2 + b_2 h^2 + ewh \quad . \quad . \quad . \quad . \quad . \quad . \quad (1)$$

where a_0 , a_2 , a_3 , b_2 , b_3 , and e are constants to be determined from the data.

Now, let n_{wh} be the number of families in which the age of wife at marriage was W and the age of husband at marriage was H, then multiplying (1) throughout by n_{wh} , summing for all values of n_{wh} and dividing by N we get

$$0 = \alpha_0 + b_{2w}\mu_2 + b_{3h}\mu_2 + e_{wh}p_{11} \quad (2)$$

Again, multiply (1) throughout by n_{wh} and also by the corresponding value of w , summing and dividing by N as before, and we get

$$cw p_{11} = a_2 w \mu_2 + a_3 wh p_{11} + b_2 w \mu_3 + b_3 wh p_{12} + e wh p_{21} \quad (3)$$

Similarly,

$$ch p_{11} = a_2 wh p_{11} + a_3 h \mu_2 + b_2 wh p_{21} + b_3 h \mu_3 + e wh p_{12} \quad (4)$$

$$cw p_{12} = a_0 w \mu_2 + a_2 w \mu_3 + a_3 wh p_{21} + b_2 w \mu_4 + b_3 wh p_{22} + e wh p_{31} \quad (5)$$

$$ch p_{12} = a_0 h \mu_2 + a_2 wh p_{12} + a_3 h \mu_3 + b_2 wh p_{22} + b_3 h \mu_4 + e wh p_{13} \quad (6)$$

$$cw p_{13} = a_0 w \mu_3 + a_2 w \mu_4 + a_3 wh p_{31} + b_2 w \mu_5 + b_3 wh p_{32} + e wh p_{41} \quad (7)$$

Eliminating a_0 , we get the following five equations to calculate the constants a_2 , a_3 , b_2 , b_3 , e .

$$a_2 w \mu_2 + a_3 wh p_{11} + b_2 w \mu_3 + b_3 wh p_{12} + e wh p_{21} = cw p_{11}$$

$$a_2 wh p_{11} + a_3 h \mu_2 + b_2 wh p_{21} + b_3 h \mu_3 + e wh p_{12} = ch p_{11}$$

$$a_2 w \mu_3 + a_3 wh p_{21} + b_2 (w \mu_4 - w \mu_2^2) + b_3 (wh p_{22} - w \mu_2 h \mu_2) + e (wh p_{31} - w \mu_2 wh p_{11}) = cw p_{12}$$

$$a_2 wh p_{12} + a_3 h \mu_3 + b_2 (wh p_{22} - w \mu_2 h \mu_2) + b_3 (h \mu_4 - h \mu_2^2) + e (wh p_{13} - h \mu_2 wh p_{11}) = ch p_{12}$$

$$a_2 w \mu_4 + a_3 wh p_{31} + b_2 (w \mu_5 - w \mu_3 w \mu_2) + b_3 (wh p_{32} - w \mu_3 h \mu_2) + e (wh p_{41} - w \mu_3 wh p_{11}) = cw p_{13}$$

Now,

$$w \mu_2 = 35.194523$$

$$h \mu_2 = 49.853339$$

$$w \mu_3 = 191.812080$$

$$h \mu_3 = 510.776605$$

$$w \mu_4 = 4199.850508$$

$$h \mu_4 = 14472.708571$$

$$w \mu_5 = 48855.214483$$

$$cw p_{11} = -12.496338$$

$$ch p_{11} = -11.365774$$

$$cw p_{12} = -58.882499$$

$$ch p_{12} = -88.968385$$

$$cw p_{13} = -1387.335131$$

$$wh p_{11} = 29.697442$$

$$wh p_{12} = 260.200785$$

$$wh p_{21} = 188.181117$$

$$wh p_{13} = 7244.860984$$

$$wh p_{31} = 3791.578014$$

$$wh p_{22} = 4906.400857$$

$$wh p_{41} = 46736.961908$$

$$wh p_{32} = 59744.955959$$

$$w \mu_4 - w \mu_2^2 = 2961.196059$$

$$h \mu_4 - h \mu_2^2 = 11987.353162$$

$$w \mu_5 - w \mu_3 w \mu_2 = 42104.479822$$

$$wh p_{31} - w \mu_2 wh p_{11} = 2746.390708$$

$$wh p_{13} - h \mu_2 wh p_{11} = 5764.344341$$

$$wh p_{32} - w \mu_3 h \mu_2 = 50182.483310$$

$$wh p_{41} - w \mu_3 wh p_{11} = 41040.633787$$

$$wh p_{22} - w \mu_2 h \mu_2 = 3151.836371$$

Substituting these values and solving the equations we get

$$a_2 = -.346976$$

$$a_3 = -.040905$$

$$b_2 = -.002846$$

$$b_3 = -.003494$$

$$e = +.012675$$

$$\therefore c_{wh} = -.346976 w - .040905 h - .002846 (w^2 - w \mu_2) - .003494 (h^2 - h \mu_2) + .012675 (wh - wh p_{11})$$

$$\therefore C_{WH} - \bar{C} = -.346976 (W - \bar{W}) - .040905 (H - \bar{H}) - .002846 \{ (W - \bar{W})^2 - w \mu_2 \} - .003494 \{ (H - \bar{H})^2 - h \mu_2 \} + .012675 \{ (W - \bar{W})(H - \bar{H}) - wh p_{11} \}$$

Now,

$$\bar{C} = 5.488783$$

$$w \mu_2 = 35.194523$$

$$\bar{W} = 26.008056$$

$$h \mu_2 = 49.853339$$

$$\bar{H} = 28.155770$$

$$wh p_{11} = 29.697442$$

Substituting these values and multiplying out we get finally

$$C_{WH} = 20.149493 - .555812 W - .173804 H \\ - .002846 W^2 - .003494 H^2 + .012675 W H.$$

(5) **Remarks on Table of Completed Fertilities.**—The constants of the equation (1) have been worked out on the assumption that the means actually lie on a surface of the second degree; but I also obtained the same equation to give c_{wh} in terms of w and h by determining the values of the constants of the most general function, u , of the second degree in w and h so as to get the maximum correlation between u and c . This method for finding a non-linear multiple regression formula is based on that given by Professor Pearson for finding the linear multiple regression formula ("Biometrika," vol. viii., page 438), and it leads to the same result as the method of least squares.

It will be observed on comparing the results given in this Table with those given from the actual data (Table XXXV. (3), page 258 of this Report), that though for the greater part of the Table the numbers given by the equation correspond closely to the observed values, they diverge somewhat from them at the borders of the Table. This may probably be accounted for by the small number of marriages round the border of the Table, and these small numbers of marriages would be further diminished in the case of husbands of from 40 to 60 having wives of from 15 to 25, as the marriage had in each case continued until the wife had completed her fertile period. But, even allowing for this, it seems possible that the surface given by the equation does not give a very good fit round the border, the theoretical numbers being in some parts too high and in others too low. A possible explanation of part of this divergence might be that marriages between men of from 15-25 and women of 35-44, and between men of 45-60, and women of from 15-25, are not strictly comparable with other marriages. For certain reasons they are somewhat abnormal, and a higher fertility might therefore reasonably be expected. In other words, while the surface given by the equation describes fairly accurately the fertility in what might be called the normal marriages, it may not and could hardly be expected to describe accurately the fertility of abnormal marriages.

(6) **The Problem in the Case of the Continuing Fertilities.**—This part deals with marriages in which the wife had not completed her fertile period, *i.e.*, she had not attained the age of 45.

The problem in this case was to construct a Table shewing the average number of children to be expected for a given duration of marriage when a wife of a given age marries a husband of a given age. The Table was to give an answer to a question like the following:—A man of 28 marries a woman of 26, what is the average number of children to be expected when the marriage has lasted four complete years? There are, accordingly, three independent variables, the age of wife at marriage, W ; the age of husband at marriage, H ; and the duration of marriage, D ; and one dependent variable, C_{WHD} , the mean number of children. These, of course, cannot all find place in a single Table, and to get over this difficulty the age of wife and age of husband at marriage were taken to be identical for the purpose of the Table, and an expression is given to correct the mean number of children when the age of husband is different from that of the wife.

The data, which were also abstracted from the recent Census Returns by Dr Dunlop, were included in six tables.

- (1) A Table shewing the number of families for a given age of wife at marriage, and a given size of family.
- (2) A Table shewing the number of families for a given age of husband at marriage, and a given size of family.
- (3) A Table shewing the number of families for a given duration of marriage, and a given size of family.
- (4) A Table shewing the number of families for a given age of wife at marriage and a given age of husband at marriage.
- (5) A Table shewing the number of families for a given age of wife at marriage and a given duration of marriage.
- (6) A Table shewing the number of families for a given age of husband at marriage and a given duration of marriage.

These Tables are published in the present volume of the Report (Tables XXXIX. to XLIV.), but, as in the case of the completed fertilities, the ages above 60 of the husband are not given for the Tables (2), (4), and (6).

The distributions for age of wife, size of family, and duration of marriage for ages of husband between 60 and 75 were supplied to me by Dr Dunlop, and it was on these extended Tables that the constants were calculated.

(7) Preliminary Examination of Data on Continuing Fertilities.—A preliminary investigation of these data similar to that in the completed fertilities shewed that all the regressions (with the possible exception of number of children on duration of marriage) were distinctly non-linear. The means of the arrays of any one variable for given types of a second when plotted on squared paper indicated curves very similar to those in the completed fertilities.

The values of η , r , and $\frac{\eta-r}{E_{\eta-r}}$, calculated from the unextended data, were as follows :—

	η	r	$\frac{\eta-r}{E_{\eta-r}}$
Number of children and age of wife at marriage . . .	·3720	—·3667	30·77
Number of children and age of husband at marriage . .	·2797	—·2621	48·04
Number of children and duration of marriage.	·6868	·6858	18·02
Age of wife at marriage and age of husband at marriage .	·6247	·6138	57·18
Age of wife at marriage and duration of marriage . . .	·3437	—·3298	47·54
Age of husband at marriage and duration of marriage . .	·2188	—·2099	30·51

As in the previous case these results are only to be regarded as approximate, but they serve to shew sufficiently clearly the deviation from linearity.

(8) Method of finding Formulæ for Continuing Fertilities Table.—To find a formula suitable for this case we adopt a method similar to that used in the completed fertilities.

Let D = duration of marriage,
 $\bar{D}$ = the mean duration of marriage,
 $D-\bar{D} = d$

$d\mu_1, d\mu_2, d\mu_3, d\mu_4$ = the first, second, third, and fourth moments of the distribution of the durations of marriage about the mean,

$$\begin{aligned} N_{cd}p_{11} &= S(cd) \\ N_{wd}p_{11} &= S(wd) \\ N_{wd}p_{21} &= S(w^2d) \\ N_{hd}p_{11} &= S(hd) \text{ etc.} \end{aligned}$$

$$\begin{aligned} N_{cd}p_{12} &= S(cd^2) \\ N_{wd}p_{12} &= S(wd^2) \\ N_{wd}p_{22} &= S(w^2d^2) \end{aligned}$$

The rest of the notation is the same as that used for the completed fertilities. These product moments were first calculated about an assumed origin and then transferred to the mean by the use of the formulæ given on page xlv or formulæ similar to them.

Then, if C_{WHD} be the mean number of children when a wife of age W marries a husband of age H and the marriage has gone on for D years, and if

$$C_{WHD}-\bar{C} = c_{whd}$$

we assume

$$c_{whd} = \alpha_0 + \alpha_2w + \alpha_3h + \alpha_4d + b_2w^2 + b_3h^2 + b_4d^2 \dots \dots \dots (1)$$

where $\alpha_0, \alpha_2, \alpha_3, \alpha_4, b_2, b_3, b_4$ are constants to be calculated from the data.

This equation of course is not the most general equation of the second degree that could be used as the product terms wh, hd, wd have not been included. An attempt

Hence

$$c_{whd} = -\cdot 091327 w - \cdot 035688 h + \cdot 273132 d + \cdot 004307 (w^2 - {}_w\mu_2) + \cdot 000955 (h^2 - {}_h\mu_2) - \cdot 002118 (d^2 - {}_d\mu_2)$$

$\therefore$ transferring back to the absolute values

$$C_{wHD} - \bar{C} = -\cdot 091327 (W - \bar{W}) - \cdot 035688 (H - \bar{H}) + \cdot 273132 (D - \bar{D}) + \cdot 004307 \{ (W - \bar{W})^2 - {}_w\mu_2 \} \\ + \cdot 000955 \{ (H - \bar{H})^2 - {}_h\mu_2 \} - \cdot 002118 \{ (D - \bar{D})^2 - {}_d\mu_2 \}$$

Now

$$\begin{aligned} \bar{C} &= 3\cdot 201971 \\ \bar{W} &= 23\cdot 922946 \\ \bar{H} &= 26\cdot 912146 \\ \bar{D} &= 9\cdot 858855 \end{aligned}$$

$\therefore$ finally,

$$C_{wHD} = 6\cdot 571791 - \cdot 297399 W - \cdot 087090 H + \cdot 314894 D + \cdot 004307 W^2 \\ + \cdot 000955 H^2 - \cdot 002118 D^2$$

It was from this equation that the table was constructed. H was put equal to W , and W was given all the values from 15 to 44 inclusive.

Now to get the correction to be added on to the number given in the table when the age of husband at marriage is different from that of the wife; let

C_{wHD} = the mean number of children, for a given duration D , when the age of wife at marriage is W and the age of husband at marriage is H , different from W ,

C_{wWD} = the mean number of children for the same duration D , when the age of wife at marriage is W and the age of husband at marriage is also W ; (this is the number given in the table)

then

$$C_{wHD} = 6\cdot 571791 - \cdot 297399 W - \cdot 087090 H + \cdot 314894 D + \cdot 004307 W^2 + \cdot 000955 H^2 - \cdot 002118 D^2$$

and

$$C_{wWD} = 6\cdot 571791 - \cdot 297399 W - \cdot 087090 W + \cdot 314894 D + \cdot 004307 W^2 + \cdot 000955 W^2 - \cdot 002118 D^2$$

hence subtracting

$$C_{wHD} - C_{wWD} = -\cdot 087090 (H - W) + \cdot 000955 (H^2 - W^2) = (H - W) \{ -\cdot 087090 + \cdot 000955 (H + W) \}$$

$$\therefore (H - W) \{ -\cdot 087090 + \cdot 000955 (H + W) \}$$

is the quantity to be added on to the number given in the table under duration D and age of husband and wife at marriage W , when the age of husband at marriage is H , which is different from W .

(9) **Remarks on Table of Continuing Fertilities.**—As in completed fertilities the constants of equation (1) were worked out on the assumption that the means actually satisfy an equation of the second degree of the form indicated by equation (1); but I also obtained the same equation to give c_{whd} in terms of w, h, d , by determining the constants of a function u of the second degree in w, h , and d , and of the same form as (1) so as to get the maximum correlation between u and c . This again leads to the same result as the method of least squares.

It has already been pointed out that, on account of the omission of the product terms, this equation does not give quite so satisfactory results as the corresponding one for the completed fertilities.

It would, indeed, have been better to have constructed a separate table for each duration of marriage. Again, however, the amount of time and clerical assistance at my

disposal were insufficient to overtake the enormous amount of work necessary for the accurate construction of some thirty tables, similar in nature to that of the completed fertilities, and this prevented such an investigation being carried out.

We might compare the two tables, either directly where the age of husband at marriage is equal to the age of wife at marriage, or by using the correcting formula where the age of husband at marriage differs from the age of wife at marriage, and when we do this we get results which give a fair agreement for a considerable part of the tables, but which diverge (in some cases considerably) round the borders. Complete agreement, however, cannot be expected as, in the first place, the second table is not quite so satisfactory at the first ; and, secondly, and far more important, the figures given in the two tables are based on totally different data.

TABLE XVI.—DISTRIBUTION OF INFIRM—MALES.

Note.—The figures in the "Total" columns of the Tables referring to Infirmities include not only persons afflicted with the particular infirmity being dealt with, but also those afflicted with that infirmity in combination with one or more other infirmities. Thus persons afflicted with blindness and deafness are included in the "Total" column of the Blind and in the "Total" column of the Deaf. By adding the numbers of those afflicted with combined infirmities, and deducting the sum from the "Total," the number of persons afflicted with the particular infirmity singly, and not in combination with another infirmity, may be ascertained.

TABLE XXV.—COMPLETE LIST, WITH REFERENCE NUMBERS, OF THE OCCUPATIONS USED IN THE TABULATION OF THE CENSUS OF SCOTLAND.

Note.—The following List shows the classification on which the numbers in Tables I. to VI., XXII. and XXIV. are based; but it is to be observed that in these Tables it was found necessary, when the numbers returned were small, to combine Occupations of similarity of character, and in some cases where no such combination could be made, to summarise the numbers under the general heading "Other Specified Occupations." Where the name or the reference number of any Occupation does not appear in the Tables, it is to be assumed either that no persons were returned under such Occupation, or that the numbers so returned were, for the reason referred to, entered under the heading "Other Specified Occupations."

I.—GENERAL OR LOCAL GOVERNMENT OF THE COUNTRY.

1. National Government.

1. Post Office—Officers, Clerks, Telegraphists, Telephone Operators
2. Postmen; Post Office Messengers, &c.
3. Other Civil Service Officers and Clerks
4. Other Civil Service Messengers, &c.

2. Local Government.

5. Police
6. Municipal, Parish and other Local or County Officers

II.—DEFENCE OF THE COUNTRY.

1. Army.

7. Army Officers (Effective and Retired)
8. Soldiers and Non-Commissioned Officers

2. Navy and Marines.

9. Officers of the Navy and Marines (Effective and Retired)
10. Men of the Navy and Marines

III.—PROFESSIONAL OCCUPATIONS AND THEIR SUBORDINATE SERVICES.

1. Clerical.

11. Ministers (Established Church)
12. Ministers (United Free Church)
13. Ecclesiastical Clergymen
14. Roman Catholic Priests
15. Ministers, Clergymen of other religious bodies
16. Missionaries, Scripture Readers, Itinerant Preachers
17. Monks, Nuns, Sisters of Charity
18. Church, Chapel, Cemetery—Officers, &c.

2. Legal.

19. Advocates, Solicitors
20. Law Clerks

3. Medical.

21. Physicians, Surgeons, Registered Practitioners
22. Dentists (including Assistants)
23. Veterinary Surgeons
24. Midwives
25. Sick Nurses, Invalid Attendants
26. Subordinate Medical Service

4. Teaching.

27. Schoolmasters, Teachers, Professors, Lecturers
28. Others connected with Education

5. Literary and Scientific.

29. Authors, Editors, Journalists, Reporters
30. Persons engaged in Scientific Pursuits
31. Others connected with Literature, &c.

6. Engineers and Surveyors.

32. Civil, Mining—Engineers
33. Land, House, Ship—Surveyors
34. Professional Engineers', Professional Surveyors'—Assistants

7. Art, Music, Drama.

35. Painters, Sculptors, Engravers
36. Architects
37. Photographers
38. Musicians, Music Masters, Singers (not Street)
39. Actors
40. Art, Music, Theatre—Service, &c.

8. Exhibition, Games, &c.

41. Performers, Showmen; Exhibition, Games—Service

IV.—DOMESTIC OFFICES OR SERVICES.

1. Domestic Indoor Service.

42. Domestic Indoor Servants in Hotels, Lodging-Houses, Eating-Houses
43. Other Domestic Indoor Servants

2. Domestic Outdoor Service.

44. Domestic—Coachmen, Grooms
45. Domestic—Motor Car Drivers, Motor Car Attendants
46. Domestic Gardeners
47. Gamekeepers

3. Other Service.

48. College, Club—Service
49. Hospital, Institution, and Benevolent Society Service
50. Caretakers; Office, Park, Lodge, Gate—Keepers (not Government)
51. Cooks (not Domestic)
52. Charwomen, Cleaners
53. Laundry Workers; Washers, Ironers, Manglers, &c.
54. Bath and Wash-house Service; others engaged in Service

V.—COMMERCIAL OCCUPATIONS.

1. Merchants, Agents, and Accountants.

55. Merchants (Commodity undefined)
56. Brokers, Agents, Factors
57. Salesmen, Buyers (not otherwise described)
58. Commercial Travellers
59. Accountants
60. Auctioneers, Appraisers, Valuers, House Agents
61. Officers of Commercial Guilds, Societies, &c.

2. Commercial or Business Clerks.

62. Commercial or Business Clerks

3. Dealers in Money.

63. Bankers; Bank—Officials, Clerks
64. Bill—Discounters, Brokers; Finance Agents

4. Insurance.

65. Life, House, Ship, &c., Insurance—Officials, Clerks, &c.
66. Insurance Agents

VI.—CONVEYANCE OF PERSONS, GOODS, AND MESSAGES.

1. On Railways.

67. Railway—Officials, Clerks
68. Railway Ticket—Examiners, Collectors; Railway Porters
69. Railway Engine—Drivers, Stokers, Cleaners
70. Railway Guards
71. Signalmen
72. Pointsmen, Level Crossing Men
73. Platelayers, Gangers, Packers
74. Railway Labourers (not Railway Contractors Labourers); other Railway Servants

2. On Roads.

75. Livery Stable Keepers; Coach, Cab—Proprietors
76. Horsekeepers, Grooms, Stablemen, Coachmen (not Domestic); Cabmen
77. Motor Car Drivers (not Domestic), Motor Cab Drivers, Motor Van, &c., Drivers
78. Vanmen, Lorrymen, Carriers, Carters (not Farm)
79. Omnibus Service—Horse Drivers
80. Do. Motor Drivers
81. Do. Conductors and Others
82. Tramway Service—Drivers
83. Do. Conductors and Others
84. Others connected with Carrying or Cartage; others on Roads

3. On Seas, Rivers, and Canals.

85. Merchant Service; Seamen—Navigating Department
86. Do. Engineering Department
87. Do. Cooks, Stewards, and Others (Subsidiary Services)
88. Pilots; Boatmen on Seas
89. Bargemen, Lightermen, Watermen
90. Navigation Service (on Shore)

4. In Docks, Harbours, and Lighthouses.

91. Dock Labourers, Quay Labourers
92. Harbour, Dock, Quay, Lighthouse—Officials and Servants

5. In Storage, Portage, and Messages.

93. Warehousemen
94. Coalheavers; Coal—Porters, Labourers
95. Messengers, Porters, Watchmen (not Railway or Government)
96. Telegraph, Telephone—Service (not Government)

VII.—AGRICULTURE.

1. On Farms, Woods, and Gardens.

97. Farmers, Graziers
98. Farmers', Graziers'—Sons, Daughters, or other Relatives assisting in the work of the Farm
99. Crofters
100. Crofters'—Sons, Daughters, or other Relatives assisting in the work of the Croft
101. Farm—Grieves, Foremen
102. Shepherds
103. Agricultural Labourers, Farm Servants—in charge of Cattle
104. Do. Do. in charge of Horses
105. Do. Do. Others or unspecified
106. Foresters, Woodmen
107. Nurserymen, Seedsmen, Florists
108. Market Gardeners (including Labourers)
109. Other Gardeners (not Domestic)
110. Agricultural Machine—Proprietors, Attendants
111. Others engaged in or connected with Agriculture

VIII.—FISHING.

1. In Fishing.

112. Fishermen
113. Fishermen—crofters

IX.—MINING AND QUARRYING.

1. Mine and Quarry Service.

114. Coal and Shale Mine—Hewers
115. Do. Other Workers belowground
116. Do. Workers above ground
117. Coke Burners
118. Patent Fuel Makers
119. Ironstone—Miners, Quarriers
120. Lead Miners
121. Miners in other Minerals
122. Coal, Shale, and Metalliferous Mine—Owners, Agents, Managers
123. Other Mine Service
124. Stone, Slate, &c., Mine or Quarry—Owners, Agents, Managers
125. Stone—Miners, Quarriers
126. Stone—Cutters, Dressers
127. Slate—Miners, Quarriers, Workers
128. Limeburners
129. Clay, Sand, Gravel Chalk—Pit, &c., Workers
130. Other Workers in Products of Quarries

2. Dealers in Products of Mines and Quarries.

131. Coal, Coke—Merchants, Dealers
132. Dealers in Stone, Slate, &c.

X.—METAL, MACHINE, IMPLEMENT, AND CONVEYANCE MANUFACTURE.

1. Iron and Steel Manufacture.

133. Pig Iron Manufacture (Blast Furnaces)
134. Puddling Furnaces and Rolling Mills; Tube Manufacture
135. Steel—Manufacture, Smelting, Founding

2. Manufacture of Other, Mixed, or Unspecified Metals.

136. Lead Manufacture
137. Manufacture of other or unspecified Metals

3. Engineering and Machine Making.

138. Patternmakers
139. Millwrights
140. Ironfounders
141. Brassfounders
142. Blacksmiths, Strikers
143. Erectors, Fitters, Turners
144. Brass Finishers
145. Coppermiths
146. Metal Machinists
147. Labourers in Engineering Works
148. Boiler Makers
149. Other or undefined Workers in Engine and Machine Making

4. Electrical Apparatus.

150. Electrical Cable Manufacture
151. Electric Lamp Manufacture
152. Other Electrical Apparatus Makers; Electric Fitters; Electricians (undefined)

5. Tools.

153. Tool Makers
154. File Makers
155. Saw Makers
156. Cutlery; Scissors Makers
157. Needle, Pin—Makers
158. Steel Pen Makers

6. Types, Blocks, Dies.

159. Roller Engravers, Block Cutters (for Textile, &c. Printing)
160. Type—Cutters, Founders
161. Die, Seal, Coin, Medal—Makers

7. Arms.

162. Gunsmiths, Gun Manufacturers
163. Sword, Bayonet—Makers

8. Miscellaneous Metal Trades.

164. Nail Manufacture
165. Bolt, Nut, Rivet, Screw, Staple—Makers
166. Anchor, Chain—Manufacture
167. Stove, Grate, Range, Fire Iron—Makers
168. Wire—Drawers, Makers, Workers, Weavers
169. White Metal, Plated—Ware Manufs.; Pewterers
170. Tinplate Goods Makers
171. Copper Workers
172. Leaden Goods Makers
173. Zinc Workers
174. Brass, Bronze—Workers
175. Other Iron Goods Makers; Iron Workers (undefined)
176. Other Metal Workers

9. Ships and Boats.

177. Ship—Platers, Rivetters, &c.
178. Ship—Other Workers in Iron
179. Shipwrights
180. Ship—Other Workers in Wood
181. Ship Painters; Shipyard Labourers (undefined); Others in Ship and Boat Building

10. Vehicles.

182. Railway—Coach, Wagon Makers
183. Cycle Makers
184. Motor Car Makers
185. Coach, Carriage—Makers
186. Wheelwrights
187. Others in Construction of Vehicles

11. Dealers in Hardware, Metals, Machines.

188. Ironmongers; Hardware—Dealers, Merchants
189. Other Dealers in Metals, Machines, &c.

TABLE XXV.—*continued.*

XI.—PRECIOUS METALS, JEWELS, WATCHES, INSTRUMENTS, AND GAMES.

1. Precious Metals and Jewellery.

190. Goldsmiths, Silversmiths, Jewellers
191. Lapidaries and other Workers

2. Watches and Scientific Instruments.

192. Watchmakers, Clockmakers
193. Scientific Instrument Makers; Opticians; Photographic Apparatus Makers
194. Weighing and Measuring Apparatus Makers
195. Surgical and Dental Instrument and Apparatus Makers

3. Musical Instruments.

196. Piano, Organ—Makers
197. Other Musical Instrument Makers

4. Tackle for Sports and Games.

198. Fishing Tackle, Toy, Game Apparatus—Makers

5. Dealers.

199. Dealers in Precious Metals, Jewellery, and Watches
200. Dealers in Instruments, Toys, &c.

XII.—BUILDING AND WORKS OF CONSTRUCTION.

1. House Building, &c.

201. Architectural, Monumental—Carvers, Sculptors, Masons
202. Builders
203. Builders' Labourers
204. Carpenters, Joiners
205. Carpenters', Joiners'—Labourers
206. Bricklayers
207. Bricklayers' Labourers
208. Masons
209. Masons' Labourers
210. Slaters, Tilers
211. Plasterers
212. Plasterers' Labourers
213. Painters, Paperhangers, Decorators
214. Glaziers
215. Plumbers, Gasfitters
216. Locksmiths, Bellhangers

2. Other Works of Construction.

217. Railway, Canal, Harbour, &c.—Contractors
218. Navvies; Railway, &c., Contractors' Labourers
219. Well, Mine—Sinkers, Borers
220. Road—Contractors, Surveyors, Inspectors
221. Paviments; Road Labourers

XIII.—WOOD, FURNITURE, FITTINGS, AND DECORATIONS.

1. Furniture, Fittings, and Decorations.

222. Cabinet Makers
223. French Polishers
224. Upholsters
225. House and Shop Fittings Makers
226. Undertakers; Funeral Furniture Makers
227. Wood Carvers; Carvers and Gilders
228. Willow, Cane, Rush—Workers; Basket Makers
229. Dealers in Works of Art
230. Furniture, &c., Dealers

2. Wood and Bark.

231. Sawyers; Wood Cutting Machinists
232. Lath, Wooden Fence, Hurdle—Makers
233. Wood Turners
234. Wooden Box, Packing Case—Makers
235. Coopers; Hoop—Makers, Benders
236. Cork, Bark—Cutters, Workers
237. Other Workers in Wood
238. Timber, Wood, Cork, Bark—Merchants, Dealers

XIV.—BRICK, CEMENT, POTTERY, AND GLASS.

1. Brick, Cement, Pottery, and Glass.

239. Brick, Plain Tile, Terra-Cotta—Makers
240. Plaster, Cement—Manufacture
241. Earthenware, China, Porcelain—Manufacture
242. Sheet, Plate—Glass Manufacture
243. Glass Bottle Manufacture
244. Other Workers in Glass Manufacture
245. Brick, Cement—Dealers
246. Earthenware, China, Glass—Dealers

XV.—CHEMICALS, EXPLOSIVES, OIL, SOAP, RESIN, &c.

1. Colouring Matter.

247. Dye, Paint, Ink, Blacking—Manufacture

2. Explosives and Matches.

248. Gunpowder, Guncotton, Explosive Substance—Manufacture
249. Cartridge, Fireworks, Explosive Article—Manuf.
250. Lucifer Match Manufacture

3. Salt, Drugs, and other Chemicals and Compounds.

251. Salt Makers
252. Manufacturing Chemists
253. Alkali Manufacture
254. Chemists, Druggists

4. Oil, Grease, Soap, Resin, &c.

255. Mineral Oil Workers
256. Other Oil Workers; Oil Cake Makers
257. Candle, Grease—Manufacture
258. Soap—Boilers, Makers
259. Manure Manufacture
260. India Rubber, Gutta Percha—Workers
261. Waterproof Goods Makers
262. Glue, Size, Varnish, &c.—Makers
263. Dealers in Paint, Explosives, Oil, Soap, Resin, &c.

XVI.—SKINS, LEATHER, HAIR, AND FEATHERS.

1. Skins and Leather.

264. Furriers, Skinners
265. Tanners
266. Curriers
267. Leather Goods, Portmanteau, Bag, Strap, &c., Makers

2. Saddlery and Harness.

268. Saddlers; Harness, Whip—Makers

3. Hair and Feathers.

269. Brush, Broom—Makers; Hair, Bristle—Workers
270. Quill, Feather—Dressers

4. Dealers in Skins, Leather, Hair, and Feathers.

271. Dealers in Skins, Leather, Hair, and Feathers

XVII.—PAPER, STATIONERY, BOOKS, AND PRINTS.

1. Paper and Stationery.

272. Paper Manufacture
273. Paper Stainers
274. Stationery Manufacture; Envelope Makers
275. Paper Bag, Cardboard Box—Makers
276. Other Workers in Paper, &c.
277. Stationers, Law Stationers; Dealers in Paper

2. Books and Prints.

278. Printers
279. Lithographers; Copper and Steel Plate Printers
280. Bookbinders
281. Publishers, Booksellers, Newspaper Publishers
282. Newspaper Agents, News Room Keepers

XVIII.—TEXTILE FABRICS.

1. Cotton.

283. Cotton—Card and Blowing Room Processes
284. Do. Spinning Processes
285. Do. Winding, Warping, &c., Processes
286. Do. Weaving Processes
287. Do. Workers in other and in undefined Processes

2. Wool and Worsted.

288. Wool—Sorting Processes
289. Do. Carding and Combing Processes
290. Wool and Worsted—Spinning Processes
291. Do. Weaving Processes
292. Do. Workers in other and in undefined Processes

3. Silk.

293. Silk—Spinning Processes
294. Do. Weaving Processes
295. Do. Workers in other and in undefined Processes

4. Flax, Linen, Hemp, Jute, and other Fibrous Materials.

296. Flax, Linen—Manufacture
297. Hemp, Jute—Manufacture
298. Cocoa Fibre Manufacture; Mat Makers
299. Rope, Twine, Cord—Makers
300. Canvas, Sailcloth, Sacking, Net, &c.—Manufacture

5. Mixed or Unspecified Materials.

301. Thread Manufacture
302. Hosiery Manufacture
303. Lace Manufacture
304. Carpet, Rug, Felt—Manufacture
305. Smallware, Fancy Goods (Textile), &c.—Manuf.
306. Weavers and Workers in Sundry and in undefined Fabrics; Factory Hands (Textile) undefined

6. Bleaching, Printing, Dyeing, &c.

307. Textile Bleachers
308. Textile Printers
309. Textile Dyers
310. Textile—Calenderers, Finishers, &c.

7. Dealers.

311. Drapers, Linen Drapers, Mercers
312. Other Dealers in Textile Fabrics

XIX.—DRESS.

1. Dress.

313. Straw Plait, Straw Hat, Straw Bonnet—Manufacture
314. Other Hat Manufacture; Cap Manufacture
315. Milliners
316. Hat, Bonnet, Straw Plait, &c.—Dealers
317. Tailors
318. Clothiers, Outfitters—Dealers
319. Dressmakers
320. Stay, Corset—Makers
321. Shirt Makers; Seamstresses
322. Button Makers
323. Glove Makers
324. Hosiery, Haberdashers
325. Boot, Shoe—Makers
326. Slipper Makers
327. Patten, Clog—Makers
328. Boot, Shoe, Patten, Clog—Dealers
329. Wig Makers; Hairdressers
330. Umbrella, Parasol, Stick—Makers
331. Other Workers in Dress
332. Other Dealers in Dress

XX.—FOOD, TOBACCO, DRINK, AND LODGING.

1. Food.

333. Creamery Workers
334. Milksellers, Dairymen
335. Provision Curers
336. Cheesemongers, Buttermen, Provision Dealers
337. Slaughterers, Slaughter House Workers
338. Butchers, Meat Salesmen
339. Fish Curers
340. Fishmongers, Poulterers, Game Dealers
341. Millers; Cereal Food Manufacture
342. Corn, Flour, Seed—Merchants, Dealers
343. Bread, Biscuit, Cake, &c.—Makers
344. Bakers, Confectioners—Dealers
345. Sugar Refiners
346. Jam, Preserve, Sweet—Makers
347. Chocolate, Cocoa—Makers
348. Grocers; Tea, Coffee, Chocolate—Dealers
349. Greengrocers, Fruiterers
350. Aerated Water, Mineral Water—Manufacture
351. Mustard, Vinegar, Spice, Pickle, &c.—Makers
352. Other Dealers in Food

2. Tobacco.

353. Tobacco Manufacture
354. Tobacconists

3. Manufacture of Spirituous Drinks.

355. Maltsters
356. Brewers
357. Distillers; Spirit Manufacture

4. Board, Lodging; Dealing in Spirituous Drinks.

358. Coffee House, Eating House—Keepers
359. Lodging House, Boarding House—Keepers
360. Inn, Hotel—Keepers; Publicans, Beersellers; Wine and Spirit—Merchants, Agents
361. Beer Bottlers, Cellarmen
362. Barmen
363. Waiters (not Domestic); others in Inn, Hotel, Eating House—Service

XXI.—GAS, WATER, ELECTRICITY, AND SANITARY SERVICE.

1. Gas, Water, Electricity Service.

364. Gasworks Service
365. Waterworks Service
366. Electricity Supply

2. Sanitary Service.

367. Drainage and Sanitary Service
368. Scavenging and Disposal of Refuse

XXII.—OTHER, GENERAL, AND UNDEFINED WORKERS AND DEALERS.

1. Billposting and Advertising.

369. Circular, Envelope—Addressers, &c.
370. Advertising, Billposting—Agents
371. Billposters
372. Sandwichmen, Bill Distributors

2. About Animals.

373. Cattle, Sheep, Pig—Dealers, Salesmen
374. Drovers
375. Dog, Bird, Animal—Keepers, Dealers
376. Knackers

3. Sundry Specified Industries.

377. Celluloid—Makers, Workers
378. Tobacco Pipe, Snuff-box, &c.—Makers
379. Bone, Horn, Ivory, Tortoiseshell—Workers
380. Floor Cloth, Oil Cloth—Manufacture
381. Japanners
382. Chimney Sweeps
383. Rag-Gatherers, Dealers
384. Other Workers in Sundry Industries
385. Other Dealers in Sundry Industries
386. Receiving Shop, Receiving Office,—Keepers Assistants (Laundry: Dyers and Cleaners)

4. Makers and Dealers (General or Undefined).

387. Multiple Shop, Multiple Store—Proprietors, Workers (general or undefined)
388. General or unclassified Shopkeepers; General Dealers
389. Pawnbrokers
390. Costermongers, Hawkers, Street Sellers
391. Contractors, Manufacturers, Managers, Superintendents (undefined)
392. News—Boys, Vendors (Street or undefined)

5. Mechanics and Labourers (General or Undefined).

393. General Labourers
394. Engine—Drivers, Stokers, Firemen (not Railway, Marine, or Agricultural)
395. Artisans, Mechanics, Apprentices (undefined)
396. Factory—Hands, Labourers (undefined)
397. Machinists, Machine Workers (undefined)

XXIII.—WITHOUT OCCUPATION OR OCCUPATION UNSPECIFIED.

398. Retired from Business (not Army or Navy)
399. Pensioners
400. Old Age Pensioners (Occupation or former Occupation not stated)
401. Private Means
402. Students and Scholars (14 years and upwards)
403. Others

FERTILITY TABLES.

EXPLANATORY NOTES.

(i) The following Tables of Fertility of Marriage are based on returns respecting 680,684 married women, out of a total enumerated of 762,835. The difference between the two numbers is accounted for principally by the elimination of cases where the wife was aged 45 and upwards at marriage, and of cases where the husband was not enumerated on the same Schedule as the wife, and consequently in which the variable (*b*), referred to in paragraph iii, was wanting. A number of cases were also rejected in which returns were obviously incorrect, mostly from the apparent inclusion of children of a first marriage in the stated fertility of a second.

(ii) The Census Schedule gave the ages of husband and wife "at last birthday," and the duration of marriage in "completed years." The ages "at marriage" have been obtained by deducting the years of the latter from the years of the former.

(iii) As originally tabulated, the results show the four following variables in combination:—(*a*) duration of marriage; (*b*) age of husband at marriage; (*c*) age of wife at marriage; (*d*) number of children born. A tabulation in this form is naturally extremely bulky, and its publication would have entailed the addition of several thousand pages to the report, and has therefore been rendered impracticable. The manuscript, however, will be preserved in the Registrar-General's Department, and will be available for purposes of further study or research by any person interested.

TABLE XXVI. (1)—FERTILITY OF MARRIAGE—GENERAL SUMMARY—

Age of Husband at Marriage.	AGE OF WIFE AT MARRIAGE.												
	15	16	17	18	19	20	21	22	23	24	25	26	27

TABLE XXXII.—AVERAGE NUMBER OF CHILDREN PER MARRIAGE BY
AGE OF HUSBAND AND AGE OF WIFE AT MARRIAGE.

(i.) See Notes on page 103.

(ii.) It should be observed that in this Table, as in the other Fertility Tables throughout the Report, the insertion of a dash (—) denotes that no marriage was recorded at the specified ages of husband and wife, while the insertion of ciphers (0·00) denotes that marriages were recorded to which no children were born.

TABLE XXXII.—FERTILITY OF MARRIAGE.—Average Number of

(1) Duration of Marriage,

TABLE XLV.—PREDICTED FERTILITY OF MARRIAGE.—Average Number of Children per Marriage calculated for Husbands and Wives of the same Age at Marriage and from the Duration of each Marriage.

The Predicted Values have been obtained from a Multiple Regression Formula of the Second Degree. To get the Average Number of Children when Ages of Wife and Husband are different, use Formula given below. The Values for Ages 15 and 16, and for Duration of Marriage 0-1 are omitted because of the exceptional nature of these cases.

Age of Husband and Wife at Marriage.	DURATION OF MARRIAGE.																											
	1-2	2-3	3-4	4-5	5-6	6-7	7-8	8-9	9-10	10-11	11-12	12-13	13-14	14-15	15-16	16-17	17-18	18-19	19-20	20-21	21-22	22-23	23-24	24-25	25-26	26-27	27-28	28-29

TABLE XLVIII.—OCCUPATIONAL FERTILITY.—Occupations with Fertilities significantly greater or significantly less than, or not significantly different from, the General Mean.

N =Total Number of Marriages dealt with=133,960.
 M =Mean Number of Children per Marriage for all Marriages dealt with=5.82.
 n =Number of Marriages in Occupational Group.
 m =Mean number of Children per Marriage in Occupational Group.

Σ =Standard deviation of M =3.0986.
 σ =Standard deviation of m .
 e =Probable error of $m - M$ =0.6745 $\sqrt{\frac{\Sigma^2}{N} + \frac{\sigma^2}{n}(1 - \frac{2n}{N})}$.
